

Evergy, Inc.

# 2024 CDP Corporate Questionnaire 2024

Word version

**Important: this export excludes unanswered questions**

This document is an export of your organization's CDP questionnaire response. It contains all data points for questions that are answered or in progress. There may be questions or data points that you have been requested to provide, which are missing from this document because they are currently unanswered. Please note that it is your responsibility to verify that your questionnaire response is complete prior to submission. CDP will not be liable for any failure to do so.

# Contents

## C1. Introduction

### (1.3) Provide an overview and introduction to your organization.

#### (1.3.2) Organization type

Select from:

Publicly traded organization

#### (1.3.3) Description of organization

*Evergy is a public utility holding company incorporated in 2017 and headquartered in Kansas City, Missouri. Evergy operates primarily through the following wholly-owned direct subsidiaries listed below. Evergy Kansas Central, Inc. (Evergy Kansas Central) is an integrated, regulated electric utility that provides electricity to customers in the state of Kansas. Evergy Kansas Central has one active wholly-owned subsidiary with significant operations, Evergy Kansas South, Inc. (Evergy Kansas South). Evergy Metro, Inc. (Evergy Metro) is an integrated, regulated electric utility that provides electricity to customers in the states of Missouri and Kansas. Evergy Missouri West, Inc. (Evergy Missouri West) is an integrated, regulated electric utility that provides electricity to customers in the state of Missouri. Evergy Kansas Central, Evergy Kansas South, Evergy Metro, and Evergy Missouri West conduct business in their respective service territories using the name Evergy. Evergy serves approximately 1,668,200 customers located in Kansas and Missouri. Customers include approximately 1,462,700 residences, 199,200 commercial firms and 6,300 industrial companies, municipalities, and other electric utilities. Evergy is significantly impacted by seasonality with approximately one-third of its retail revenues recorded in the third quarter. Responses to all sections of this Survey do not include details on our financial performance. Details on our financial performance can be found on our investor website and in our public filings available through the U.S. Securities and Exchange Commission (SEC). Materiality and its relevant definition as used in this Survey, and our ESG materiality review process, is different than the definition used in the context of filings with the SEC. Issues deemed material for purposes of this Survey and for purposes of determining our ESG strategies may not be considered material for SEC reporting purposes.*

*[Fixed row]*

### (1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.

#### (1.4.1) End date of reporting year

12/31/2023

#### (1.4.2) Alignment of this reporting period with your financial reporting period

Select from:

Yes

**(1.4.3) Indicate if you are providing emissions data for past reporting years**

Select from:

Yes

**(1.4.4) Number of past reporting years you will be providing Scope 1 emissions data for**

Select from:

1 year

**(1.4.5) Number of past reporting years you will be providing Scope 2 emissions data for**

Select from:

1 year

**(1.4.6) Number of past reporting years you will be providing Scope 3 emissions data for**

Select from:

1 year

[Fixed row]

**(1.5) Provide details on your reporting boundary.**

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?
	Select from:

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?
	<input checked="" type="checkbox"/> Yes

[Fixed row]

**(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?**

**ISIN code - bond**

**(1.6.1) Does your organization use this unique identifier?**

Select from:

No

**ISIN code - equity**

**(1.6.1) Does your organization use this unique identifier?**

Select from:

No

**CUSIP number**

**(1.6.1) Does your organization use this unique identifier?**

Select from:

No

**Ticker symbol**

**(1.6.1) Does your organization use this unique identifier?**

Select from:

Yes

**(1.6.2) Provide your unique identifier**

EVRG

**SEDOL code**

**(1.6.1) Does your organization use this unique identifier?**

Select from:

No

**LEI number**

**(1.6.1) Does your organization use this unique identifier?**

Select from:

No

**D-U-N-S number**

**(1.6.1) Does your organization use this unique identifier?**

Select from:

No

**Other unique identifier**

**(1.6.1) Does your organization use this unique identifier?**

Select from:

No

[Add row]

**(1.16.1) For your electricity generation activities, provide details of your nameplate capacity and electricity generation specifics for each technology employed.**

### **Coal - Hard**

#### **(1.16.1.1) Own or control operations which use this power generation source**

Select from:

Yes

#### **(1.16.1.2) Nameplate capacity (MW)**

6235

#### **(1.16.1.3) Gross electricity generation (GWh)**

22473.47

#### **(1.16.1.4) Net electricity generation (GWh)**

20047.93

#### **(1.16.1.5) Comment**

N/A

### **Lignite**

#### **(1.16.1.1) Own or control operations which use this power generation source**

Select from:

No

### (1.16.1.5) Comment

N/A

## Oil

### (1.16.1.1) Own or control operations which use this power generation source

Select from:

Yes

### (1.16.1.2) Nameplate capacity (MW)

685

### (1.16.1.3) Gross electricity generation (GWh)

165.23

### (1.16.1.4) Net electricity generation (GWh)

99.66

### (1.16.1.5) Comment

*Gas to Oil ratio calculated using EIA Gas and Oil breakdowns.*

## Gas

### (1.16.1.1) Own or control operations which use this power generation source

Select from:

Yes

**(1.16.1.2) Nameplate capacity (MW)**

4145

**(1.16.1.3) Gross electricity generation (GWh)**

4225.79

**(1.16.1.4) Net electricity generation (GWh)**

[Fixed row]

## (1.24) Has your organization mapped its value chain?

### (1.24.1) Value chain mapped

Select from:

No, and we do not plan to do so within the next two years

### (1.24.4) Highest supplier tier known but not mapped

Select from:

Tier 3 suppliers

### (1.24.8) Primary reason for not mapping your upstream value chain or any value chain stages

Select from:

Not an immediate strategic priority

**(1.24.9) Explain why your organization has not mapped its upstream value chain or any value chain stages**

*At this time, other strategic initiatives have been prioritized. We have stratified our suppliers into Tiers 1, 2 and 3, but we have not done that as part of a value chain mapping process that includes upstream/downstream portions of our value chain.*

[Fixed row]

**(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?**

	Plastics mapping	Primary reason for not mapping plastics in your value chain	Explain why your organization has not mapped plastics in your value chain
	Select from: <input checked="" type="checkbox"/> No, and we do not plan to within the next two years	Select from: <input checked="" type="checkbox"/> Not an immediate strategic priority	<i>At this time other strategic initiatives have been prioritized.</i>

[Fixed row]

## C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities

(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?

	From (years)	Is your long-term time horizon open ended?	To (years)
Short-term	0	Select from:	5
Medium-term	5	Select from:	15
Long-term	15	Select from: <input checked="" type="checkbox"/> No	25

[Fixed row]

(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?

	Process in place	Dependencies and/or impacts evaluated in this process
	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> Both dependencies and impacts

[Fixed row]

**(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?**

	Process in place	Risks and/or opportunities evaluated in this process	Is this process informed by the dependencies and/or impacts process?
	<i>Select from:</i> <input checked="" type="checkbox"/> Yes	<i>Select from:</i> <input checked="" type="checkbox"/> Both risks and opportunities	<i>Select from:</i> <input checked="" type="checkbox"/> Yes

[Fixed row]

**(2.2.2) Provide details of your organization’s process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.**

**Row 1**

**(2.2.2.1) Environmental issue**

*Select all that apply*

- Climate change
- Water
- Biodiversity

**(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue**

*Select all that apply*

- Dependencies
- Risks
- Opportunities

### (2.2.2.3) Value chain stages covered

*Select all that apply*

- Direct operations
- Upstream value chain
- End of life management

### (2.2.2.4) Coverage

*Select from:*

- Full

### (2.2.2.7) Type of assessment

*Select from:*

- Qualitative and quantitative

### (2.2.2.8) Frequency of assessment

*Select from:*

- Annually

### (2.2.2.9) Time horizons covered

*Select all that apply*

- Short-term
- Medium-term
- Long-term

### (2.2.2.10) Integration of risk management process

*Select from:*

- Integrated into multi-disciplinary organization-wide risk management process

### (2.2.2.11) Location-specificity used

Select all that apply

- Site-specific
- Local

### (2.2.2.12) Tools and methods used

#### Commercially/publicly available tools

- WRI Aqueduct

#### Enterprise Risk Management

- Enterprise Risk Management

### (2.2.2.13) Risk types and criteria considered

#### Acute physical

- Drought
- Tornado
- Wildfires
- Heat waves
- Toxic spills

#### thunderstorms

#### Chronic physical

- Water stress
- Groundwater depletion
- Changing wind patterns
- Declining water quality
- Temperature variability

- Cold wave/frost
- Heavy precipitation (rain, hail, snow/ice)
- Flood (coastal, fluvial, pluvial, ground water)
- Storm (including blizzards, dust, and sandstorms)
- Other acute physical risk, please specify :**Windspeed, lightning,**

- Precipitation or hydrological variability
- Increased severity of extreme weather events
- Water availability at a basin/catchment level
- Changing temperature (air, freshwater, marine water)
- Changing precipitation patterns and types (rain, hail, snow/ice)

## Policy

- Carbon pricing mechanisms
- Limited or lack of river basin management

## Market

- Changing customer behavior

## Reputation

- Increased partner and stakeholder concern and partner and stakeholder negative feedback
- Negative press coverage related to support of projects or activities with negative impacts on the environment (e.g. GHG emissions, deforestation & conversion, water stress)

## Technology

- Dependency on water-intensive energy sources
- Transition to lower emissions technology and products
- Transition to water intensive, low carbon energy sources
- Unsuccessful investment in new technologies

## Liability

- Exposure to litigation
- Non-compliance with regulations

### (2.2.2.14) Partners and stakeholders considered

*Select all that apply*

- |                                               |                                                                                    |
|-----------------------------------------------|------------------------------------------------------------------------------------|
| <input checked="" type="checkbox"/> NGOs      | <input checked="" type="checkbox"/> Regulators                                     |

| <input checked="" type="checkbox"/> Employees | <input checked="" type="checkbox"/> Other water users at the basin/catchment level |
| <input checked="" type="checkbox"/> Investors |                                                                                    |
| <input checked="" type="checkbox"/> Suppliers |                                                                                    |

### (2.2.2.15) Has this process changed since the previous reporting year?

Select from:

No

### (2.2.2.16) Further details of process

*An integrated risk assessment is performed annually to identify and evaluate operational risks, strategic risks, and externally imposed risks. A risk owner is assigned to each risk and is responsible for reviewing and updating existing risk(s) and for developing and managing the mitigation strategy. Risk conversations are then held to identify new, emerging, interdependent, or hidden risks that are not captured, and quantify and calibrate risks across the company based on their relative impact and likelihood. This approach acts as a precursor to identify threats and potential losses, as well as uncover potential opportunities and rewards. Given that risks may present multiple impacts to the same business objective, we perform a detailed analysis to understand how risks and opportunities are interrelated. Additionally, interdependencies can occur where multiple risks impact one business objective or where one risk triggers another. Risk owners have discussions on root cause analysis, consequences, mitigation, and key risk indicators for the company's top business risks and notable emerging risks and opportunities which explore the risk at a granular level to understand the root-cause, consequences, and necessary mitigation efforts. During the 2023 ERM process, Evergy's Sustainability staff held cross-functional meetings with ERM across each of the Task Force on Climate-related Financial Disclosure (TCFD) framework risk categories. During the meeting, individuals were asked to identify climate-related risks using the Task Force on Climate-related Financial Disclosure (TCFD) framework, score them based on likelihood and impact, determine timeframe (short, medium, long terms) and prioritize mitigation activities. Results were categorized based upon risk likelihood and impact over all time horizons. The risk categories below were developed using TCFD recommendations and Evergy's weighting process: • Physical Risks • Transition Risks including reputational, policy and legal, market, and technology risks. Following risk conversations, the highest-ranking climate-related risks were reported to Evergy's ESG Executive Steering Committee. Evergy's ESG Executive Steering Committee oversees ESG priority issues and the integration of them into company strategic initiatives. Additionally, the climate-related risks were also presented to the Board of Directors (BOD) Nominating, Governance and Sustainability Committee and provided to Evergy's ERM team for inclusion into the company's risk presentation for the BOD Audit Committee.*

[Add row]

## (2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?

### (2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed

Select from:

Yes

### (2.2.7.2) Description of how interconnections are assessed

*Evergy utilizes an Enterprise Risk Management (ERM) process to evaluate risks to the business. Through identification of risk, Evergy staff consider the dependencies on and impacts to resources. Environmental Compliance staff working with Sustainability staff review prior risks and new or future risk based on environmental or other factors. Changes to a dependent resource or operational changes that could lead to an environmental impact are considered in the final risk scoring process. The results of risk scoring inform possible opportunities for Evergy to take action to either reduce risk or reduce impacts.*

[Fixed row]

### (2.3) Have you identified priority locations across your value chain?

	Identification of priority locations	Primary reason for not identifying priority locations	Explain why you do not identify priority locations
	<i>Select from:</i> <input checked="" type="checkbox"/> No, and we do not plan to within the next two years	<i>Select from:</i> <input checked="" type="checkbox"/> Not an immediate strategic priority	<i>Not an immediate strategic priority.</i>

[Fixed row]

### (2.4) How does your organization define substantive effects on your organization?

#### Risks

#### (2.4.1) Type of definition

*Select all that apply*

- Qualitative
- Quantitative

#### (2.4.2) Indicator used to define substantive effect

*Select from:*

- Other, please specify :Revenue, share price, credit risk, employee turnover, shareholder value, strategic customers, capital expenditures, production capacity, liabilities, capital allocation, customer complaints, direct operating costs, indirect operating costs

#### (2.4.3) Change to indicator

Select from:

- Absolute decrease

## (2.4.6) Metrics considered in definition

Select all that apply

- Frequency of effect occurring
- Time horizon over which the effect occurs
- Likelihood of effect occurring

## (2.4.7) Application of definition

*Evergy utilizes an Enterprise Risk Management (ERM) framework that aligns top business risks with management responsibilities, and ultimately Board of Director (Board) level oversight of these risks. The Board is responsible for the oversight of all of the company's major risks (as well as mitigation plans) including strategic, financial, operational, and compliance risks. The Board has delegated some specific risk oversight responsibility to its Committees. At least once each year, the full Board receives a report from management of key risks and related mitigation plans following an extensive and iterative analysis. Management also incorporates risk and mitigation into its regular presentations to the Board. Evergy's ERM process is designed and implemented to influence Evergy's strategy, drive insight and improved performance in day-to-day operations, and enhance the effectiveness of mitigation efforts. Evergy's ERM process is not conducted with an eye toward avoiding all risk, but rather with a goal of enhancing the company's ability to identify and appropriately mitigate risks across current and future business strategies. Evergy believes this ERM process is important because it provides a structure to identify risks and related mitigation activities. In addition, it provides the framework to report to the Board on the key risks for the enterprise, including key climate risks. Evergy uses likelihood and impact parameters during our risk assessment discussions. There are 5 categories of impact: Minor (1), Moderate (2) Significant (3), Major (4) and Critical (5) and likelihood of Remote (1), Unlikely (2), Possible (3), Likely (4) and Expected (5). These categories have various estimated financial, operational (includes customer and employee impacts), compliance (includes health and safety impacts), reputational and security thresholds based on the impact and likelihood of an event. Risk Owners annually review and rank each risk based on impact and likelihood of the risk event occurring. The impact is then multiplied by the likelihood to get a total risk score.*

## Opportunities

### (2.4.1) Type of definition

Select all that apply

- Qualitative
- Quantitative

### (2.4.2) Indicator used to define substantive effect

Select from:

- Other, please specify :Customer engagement in programs, recovery of program costs, and performance incentives realized

### (2.4.3) Change to indicator

Select from:

- Absolute decrease

### (2.4.6) Metrics considered in definition

Select all that apply

- Frequency of effect occurring
- Time horizon over which the effect occurs
- Likelihood of effect occurring

### (2.4.7) Application of definition

*The Evergy Companies have implemented, and continue to offer, energy efficiency programs to help customers with their energy efficiency needs and to help manage energy costs. Both Missouri and Kansas have passed legislation promoting the implementation of cost-effective demand-side management programs and allowing for the recovery of these program costs from customers, along with the potential to earn performance incentives based upon certain criteria. In Missouri, Evergy Metro and Evergy Missouri West currently offer a suite of energy efficiency programs for customers under MEEIA. For purposes of this survey, performance incentives are defined as represented in the MEEIA Cycle 3 2019-2023 filing. There is a calculation matrix, approved by the MPSC that is used to determine this earnings opportunity. It is based upon multiple factors, including Evergy's achievement of energy and demand savings, as well as budgeted spend.*

## Risks

### (2.4.1) Type of definition

Select all that apply

- Qualitative
- Quantitative

### (2.4.2) Indicator used to define substantive effect

Select from:

Other, please specify :Revenue, share price, credit risk, employee turnover, shareholder value, strategic customers, capital expenditures, production capacity, liabilities, capital allocation, customer complaints, direct operating costs, indirect operating costs

Risk Owners annually review and rank each risk based on impact and likelihood of the risk event occurring. The impact is then multiplied by the likelihood to get a total risk score.*

[Add row]

## **(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?**

### **(2.5.1) Identification and classification of potential water pollutants**

Select from:

- Yes, we identify and classify our potential water pollutants

### **(2.5.2) How potential water pollutants are identified and classified**

*For any company facility that is discharging water offsite directly to the environment (not back to a municipality) the site holds a National Pollutant Discharge Elimination System (NPDES) permit. To obtain a NPDES permit under the Clean Water Act (CWA), Evergy must characterize the wastewater streams leaving the facilities and monitor them for pollutants. Evergy provides water samples using approved EPA test methods to the state regulating agencies who then identify any pollutants that need to be regulated. In addition to pollutants being discovered through comprehensive sampling, it is also determined from Federal Regulations (40 CFR Subpart 423) that are specific to the steam electric power generating industry and state specific requirements. In addition, the test methods associated with each individual pollutant are also regulated by these agencies to ensure test results are accurate. Evergy provides tests results to respective regulatory agencies and works closely with them to determine which pollutants should have effluent limitations and be tested more frequently as part of the NPDES permit. The pollutants that are monitored frequently are done so based on known industry-specific pollutants that are integrated into the Effluent Limitation Guidelines (ELG), knowledge of the classification of the type of wastewater, and the characteristics of the receiving stream. Common pollutant categories that are monitored include temperature, solids, metals, and nutrients.*

*[Fixed row]*

## **(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.**

Row 1

### **(2.5.1.1) Water pollutant category**

Select from:

- Oil

### (2.5.1.2) Description of water pollutant and potential impacts

*Hydrocarbons are found within oils and fuels that are used at generation sites. They are a concern to water due to being mostly insoluble. When oils and fuels enter waterways, they float on the surface of the water and have the potential to negatively impact aquatic life and human health. Hydrocarbons may also be considered detrimental to human health or the environment at higher concentrations.*

### (2.5.1.3) Value chain stage

*Select all that apply*

- Direct operations

### (2.5.1.4) Actions and procedures to minimize adverse impacts

*Select all that apply*

- Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience
- Industrial and chemical accidents prevention, preparedness, and response
- Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements
- Other, please specify :Recycling

### (2.5.1.5) Please explain

*Evergy has many systems in place to prevent oil from entering waterways. Under the CWA, Evergy is required to comply with effluent limitations, and conduct routine monitoring, which includes oil and grease. In addition to monitoring, Evergy's priority is to prevent oils from reaching waterways. The Spill Prevention Control and Countermeasures (SPCC) program, required for any facility with 1,320 or more gallons of oil, is implemented across Evergy. Each piece of equipment that can hold more than 55 gallons of oil is in the program. The program includes a site-specific plan that lists each oil filled piece of equipment and the associated containment, flow path, and spill prevention techniques. To manage spills, spill kits are located at all facilities and include materials to contain and clean up the spill. Employees are trained on this program and for sites that have significant amounts of oil, an established contract with an oil spill removal organization (OSRO) exists. Facilities that have the capacity to hold over one million gallons of oil are also subject to Facility Response Plan (FRP) requirements. This regulatory program requires more planning and onsite drills to prepare the facility for proper response to oil spills. Success of these programs are measured through facility NPDES oil and grease sample results, inspection findings by our environmental specialists, the facility's response to spills, and engagement in drills and training. We strive for 100% compliance.*

## Row 2

### (2.5.1.1) Water pollutant category

Select from:

- Other, please specify :Coal Combustion residuals

### (2.5.1.2) Description of water pollutant and potential impacts

*Coal Combustion Residuals (CCR) are defined as fly ash, bottom ash, boiler slag, and flue gas desulfurization materials generated from burning coal to make electricity. CCRs are regulated as non-hazardous solid waste under the Resource Conservation and Recovery Act. CCR contains mostly silicon, iron, and aluminum with trace amounts of mercury, cadmium, and arsenic among other metals. These pollutants can have negative impacts on human health and the environment when concentration levels are above standards. Evergy complies with the Federal CCR Regulation.*

### (2.5.1.3) Value chain stage

Select all that apply

- Direct operations

### (2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Assessment of critical infrastructure and storage condition (leakages, spillages, pipe erosion etc.) and their resilience
- Implementation of integrated solid waste management systems
- Industrial and chemical accidents prevention, preparedness, and response
- Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements
- Other, please specify :Recycling

### (2.5.1.5) Please explain

*Evergy has four operating coal-fired generation sites and three decommissioned sites that manage CCR in surface impoundments and landfills. These facilities are subject to numerous federal and state regulatory programs covering solid waste management and wastewater treatment and discharge. To reduce risk of leaching or leakage and as required under the Federal CCR regulation, Evergy routinely monitors for groundwater impacts. In 2021, Evergy ceased the use of surface impoundments for active CCR management. All impoundments have initiated closure and are in process of CCR removal or closure in place. All CCR materials generated at active sites today are disposed of in dry landfills to reduce risk of future groundwater impacts. As of 2021, all Evergy facilities have discontinued the wet disposal of coal ash. Evergy manages a public facing website that contains information related to CCR management and groundwater monitoring. Evergy engages with stakeholders and, as appropriate, holds public meetings to discuss any groundwater impacts resulting in the need for corrective action.*

**Row 3**

### (2.5.1.1) Water pollutant category

Select from:

- Other, please specify :Radiation

### (2.5.1.2) Description of water pollutant and potential impacts

*Radiation is considered a water pollutant because it can ionize and break chemical bonds. Nuclear power plants use radioactive material to generate heat to produce electricity. Release risk of this radioactive material is small. However, at Wolf Creek Nuclear Operations Center (WC) the radiological environmental monitoring program (REMP) ensures that a release would quickly be detected. The Kansas Department of Health and Environment (KDHE) performs an independent, but similar program. In addition, WC regularly hosts emergency training exercises and provides an educational calendar to area residents.*

### (2.5.1.3) Value chain stage

Select all that apply

- Direct operations

### (2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Industrial and chemical accidents prevention, preparedness, and response

### (2.5.1.5) Please explain

*To reduce release risk of radioactive material, diverse and redundant barriers and systems are in place. For example, multiple sources of onsite power exist for pumps and motors. Additionally, water samples are collected at regular frequencies. Eighteen on site, twelve off-site, and eight cooling lake perimeter ground water wells are sampled each quarter for Iodine 131, Gross Beta, and Tritium. Surface water in the cooling lake and adjacent John Redmond Reservoir is sampled monthly for Gamma Spec and Tritium. Drinking water is sampled at the water treatment facility in Burlington and Iola for Gamma Spec, Gross Beta, Iodine 131, and Tritium. Fish tissue from the cooling lake and John Redmond Reservoir is sampled twice annually for Gamma Spec and Tritium. KDHE monitors a similar suite of parameters at a similar frequency. To comply with license requirements, WC produces an annual report based on sample results for the Nuclear Regulatory Commission (NRC), KDHE, and for the public. Additionally, all effluents from the plant are sampled and treated prior to discharge. The WC Ground Water Monitoring Program and REMF are audited every two years by internal quality assurance and the NRC. The REMF conducts an annual land census to ensure residents new to the area are provided with appropriate educational materials. WC provides an annual REMF update to the Coffey County Commission. The cooling lake is open to public access and a radiation education brochure is available to anglers.*

**Row 4**

### (2.5.1.1) Water pollutant category

Select from:

- Other, please specify :Thermal pollution

### (2.5.1.2) Description of water pollutant and potential impacts

*Elevated temperatures in cooling water discharges may negatively impact aquatic life in the effluent receiving stream. This is dependent upon temperature and the duration of exposure.*

### (2.5.1.3) Value chain stage

Select all that apply

- Direct operations
- Other, please specify :Downstream of direct operations

### (2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Discharge treatment using sector-specific processes to ensure compliance with regulatory requirements
- Other, please specify :Recycling

### (2.5.1.5) Please explain

*Thermal pollution is applicable to our facilities that utilize once-through cooling systems that discharge directly to rivers. This includes three of Evergy's coal-fired facilities – Iatan, Hawthorn and Lake Road. The other coal facilities utilize cooling towers or cooling lakes where thermal pollution has not been determined to be a concern. For the once-through cooling sites, both the flow rate and temperature of the effluent and the receiving stream are monitored. Evergy uses this data to determine if the effluent is causing a five-degree temperature rise or causing the river temperature to rise above ninety-degrees Fahrenheit. This level of impact has been determined to be potentially significant to aquatic life by regulating agencies. This data is gathered daily as required by the site specific NPDES permits. The Hawthorn facility has a ten-year schedule of compliance to achieve the five degree and ninety-degree limits. At Iatan, the once-through cooling unit is currently subject to and has complied with the five-degree temperature change and has until 2027 to achieve the ninety-degree temperature limit. Lake Road has two streams that are subject to temperature monitoring and reporting and has had no prior issues meeting the temperature limitations to protect aquatic life in the Missouri River. The Hawthorn site will continue to monitor the Missouri River and impact of temperature to determine if additional studies are warranted over the next few years.*  
[Add row]

### C3. Disclosure of risks and opportunities

**(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?**

*Select from:*

Increased capital expenditures

### (3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

Yes

### (3.1.1.25) Explanation of financial effect figure

*The Evergy Companies are committed to a long-term strategy to reduce CO2 emissions in a cost-effective and reliable manner. In 2023, Evergy achieved a reduction of CO2 emissions, from owned generation, by half from 2005 levels. Evergy has a goal to achieve net-zero carbon dioxide equivalent (CO2e) emissions, for scope 1 and scope 2 emissions by 2045, assuming enabling technologies and supportive public policies are in place, with an interim goal of a 70% reduction of owned generation CO2 emissions from 2005 levels by 2030 through the responsible transition of the Evergy Companies' generation fleet. The trajectory and timing of achieving these emissions reductions are expected to be dependent on many external factors, including enabling technology developments, the reliability of the power grid, availability of transmission capacity, supportive energy policies and regulations, and other factors. To meet Evergy's goal to achieve net-zero CO2 emissions by 2045, assuming enabling technologies and supportive public policies are in place, the IRP planning process involves forecasting a variety of Evergy's key metrics, such as emissions, fuel costs, operating costs, and capital costs, out 15 to 20 years based on our customers' expected energy and capacity needs. This process of evaluating Evergy's resource plan under a variety of different scenarios and selecting a "Preferred Resource Plan" takes place in full every three years with annual updates each year between triennial filings. Our capital investment plan, published in February 2024, estimates 12.5 billion of investment through 2028, including a plan to invest nearly 2.9 billion in new generation resources, including renewable generation.*

### (3.1.1.27) Cost of response to risk

2900000000

### (3.1.1.28) Explanation of cost calculation

*Five-year capital expenditure estimate*

### (3.1.1.29) Description of response

*To meet Evergy's goal of net-zero CO2 emissions by 2045, assuming enabling technologies and supportive public policies are in place, as part of an overall strategy focused on affordability, reliability, and sustainability, the IRP process involves forecasting a variety of Evergy's metrics, such as emissions, fuel costs, operating costs, and capital costs, out 15 to 20 years based on our customers' expected energy and capacity needs. Within the IRP, there is a scenario planning process that Evergy uses to test potential resource plans and evaluate their sensitivity to a variety of factors that are outside of Evergy's control. When developing potential resource plans, Evergy considers its resource portfolio, and a variety of new supply-side or demand-side resources to be used to meet customers' energy and capacity needs. The evaluation of resource plans across the different scenarios results in the calculation of a Net Present Value of Revenue Requirement (NPVRR)*

over the planning period, which is the primary factor in selecting a Preferred Resource Plan given that NPVRR is a good indicator of value created for customers. In addition to NPVRR, Evergy calculates environmental compliance costs and a variety of metrics that are factored into the evaluation of each resource plan. Our capital investment plan, published in February 2024, estimates 12.5 billion of investment through 2027, including a plan to invest nearly 2.9 billion in new generation resources, including renewable generation. The list of risks discussed herein are not exhaustive.

## Water

### (3.1.1.1) Risk identifier

Select from:

Risk1

### (3.1.1.3) Risk types and primary environmental risk driver

#### Acute physical

Flooding (coastal, fluvial, pluvial, groundwater)

### (3.1.1.4) Value chain stage where the risk occurs

Select from:

Direct operations

### (3.1.1.6) Country/area where the risk occurs

Select all that apply

United States of America

### (3.1.1.7) River basin where the risk occurs

Select all that apply

Mississippi River

### (3.1.1.9) Organization-specific description of risk

*Projected increases in the frequency and intensity of extreme precipitation events indicate the potential for an increase in the risk of inland flooding, particularly for generation facilities located near surface water bodies (e.g., rivers, lakes, ponds). Potential impacts from increased flooding can range from nuisance flooding in employee parking lots and local roadways to flooding of infrastructure and facilities. Flooding has the potential to damage infrastructure and interrupt energy production, which could impact the ability to provide energy to customers and create financial risks.*

### **(3.1.1.11) Primary financial effect of the risk**

Select from:

- Other, please specify :impact on company assets

### **(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization**

Select all that apply

- Short-term

### **(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon**

Select from:

Select from:

- Yes

### **(3.1.1.19) Anticipated financial effect figure in the short-term – minimum (currency)**

0

### **(3.1.1.20) Anticipated financial effect figure in the short-term – maximum (currency)**

16000000

### (3.1.1.25) Explanation of financial effect figure

*The financial impact is based on the impact of flooding that occurred in 2011, along the Missouri River. This resulted in increased fuel expenses and purchased power expenses and reduced wholesale sales.*

### (3.1.1.26) Primary response to risk

#### **Policies and plans**

- Develop flood emergency plans

### (3.1.1.27) Cost of response to risk

1800000

### (3.1.1.28) Explanation of cost calculation

*latan is currently the only Evergy facility considered high risk for flooding impact. There is a site level flood emergency response plan that is implemented when the National Weather Service and United States Geological Survey (USGS) information forecasts flooding conditions.*

### (3.1.1.29) Description of response

*latan is currently the only Evergy facility considered high risk for flooding impact. There is a site level flood emergency response plan that is implemented when the National Weather Service and United States Geological Survey (USGS) information forecasts flooding conditions.*

## **Water**

### (3.1.1.1) Risk identifier

Select from:

- Risk2

### (3.1.1.3) Risk types and primary environmental risk driver

## Technology

- Dependency on water intensive energy sources

### (3.1.1.4) Value chain stage where the risk occurs

Select from:

- Direct operations

### (3.1.1.6) Country/area where the risk occurs

Select all that apply

- United States of America

### (3.1.1.7) River basin where the risk occurs

Select all that apply

- Mississippi River

### (3.1.1.9) Organization-specific description of risk

*Evergy's coal and nuclear facilities are the most water intensive resources within Evergy's fleet. During 2023, the coal facilities accounted for 96.9% of Evergy's water withdrawals and 75.9% of the water consumed, nuclear accounted for 3.1% of withdrawals and 24% consumption and Evergy's gas facilities accounted for less than 0.02% of the water withdrawals and approximately 0.12% of the water consumed. Evergy's coal and nuclear sites rely on either rivers or lakes as a water source. Of the coal-facilities, the once-through cooling facilities located along the Missouri River "River" are the most water dependent. Flows within the River are managed by the United States Army Corps of Engineers (USACE). Factors that influence the River include precipitation, temperature, and consumption. Another factor impacting Evergy is the riverbed degradation that lowers the elevation of the River bottom. This requires more flow to achieve the same elevation within the river. The uncertainty of climate factors, flow management decisions and riverbed degradation rate impose risk to facilities using the River. There is potential risk that future flows may be insufficient for the needs of our facilities to continue to operate prior to their expected end of life date. However, Evergy has been actively working on projects to become more water resilient. Additionally, we expect to invest in new non-coal generation which will result in lower water usage.*

### (3.1.1.11) Primary financial effect of the risk

Select from:

- Closure of operations

### (3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

Medium-term

### (3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

Unlikely

### (3.1.1.14) Magnitude

Select from:

Medium-low

### (3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

No

### (3.1.1.26) Primary response to risk

#### Policies and plans

Develop drought emergency plans

### (3.1.1.27) Cost of response to risk

4000000

### (3.1.1.28) Explanation of cost calculation

*The cost of response is reflective of Evergy's efforts to lower the Missouri River intake pump suction for the once-through cooling units at both Iatan and Hawthorn. Lowering the pump suction will help support the facilities to remain online when the Missouri River has low-flow conditions.*

### (3.1.1.29) Description of response

*Through 2032, as outlined in the company's Integrated Resource Plan, Evergy is planning to add 3,000 MW of renewable generation to our generation portfolio. The renewable additions will be a combination of solar and wind resources. These resources, combined with planned coal retirements, will result in lower emissions and less reliance on water-intensive resources and lower overall water use. In addition to transitioning to less water intensive generation methods, Evergy is actively considering improving water resilience with its current assets. For example, both the Iatan and Hawthorn intake structures, along the Missouri River, are being engineered to have lower pump suction levels to accommodate for the increased variability of flows within the river. This will allow the facilities to continue to run during low-flow conditions and mitigate risk of riverbed degradation.*

## Water

### (3.1.1.1) Risk identifier

Select from:

Risk3

### (3.1.1.3) Risk types and primary environmental risk driver

#### Chronic physical

Declining water quality

### (3.1.1.4) Value chain stage where the risk occurs

Select from:

Direct operations

### (3.1.1.6) Country/area where the risk occurs

Select all that apply

United States of America

### (3.1.1.7) River basin where the risk occurs

Select all that apply

Mississippi River

### (3.1.1.9) Organization-specific description of risk

*Energy relies on fresh surface and groundwater for cooling, boiler make-up, washdown water, air quality control systems, and many more uses at its generation facilities. The decline in incoming water quality has the potential to increase the cost of treating the water to an acceptable quality for facility use. Declining water quality factors include an increase in total suspended solids and increased temperatures. The increase in temperature of water coming into the facility can create inefficiencies in energy generation that could impact operations.*

### (3.1.1.11) Primary financial effect of the risk

Select from:

Increased direct costs

### (3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

Medium-term

### (3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

Unlikely

### (3.1.1.14) Magnitude

Select from:

Low

### (3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

No

### (3.1.1.26) Primary response to risk

## Infrastructure, technology and spending

- Adopt water efficiency, water reuse, recycling and conservation practices

### (3.1.1.27) Cost of response to risk

200000

### (3.1.1.28) Explanation of cost calculation

*The cost of response is measured by Evergy's annual payment to WAD. Being a member of the WAD, Evergy's Jeffrey, Lawrence and LaCygne facilities have access to upstream water reservoir storage. The upstream water can be released to assist with increasing the water quality by increasing the river flows.*

### (3.1.1.29) Description of response

*To reduce water quality risks, Evergy looks for ways to become more efficient with water resources. Long-term strategies such as investing in more renewables and reducing the use of coal generation will reduce reliance on incoming water. In the short-term, facilities are looking at water recycling and conservation practices to reduce dependency, thus reduce water quality risk. For water temperatures, the coal-fired facilities use a mix of cooling methods that include lakes, cooling towers, and once-through systems. Evergy's mitigation response also includes securing additional upstream water, stored in reservoirs, for the Kansas facilities. The release of the additional storage can assist in improving water quality for both solids and temperature.*

## Water

Select all that apply

- United States of America

### (3.1.1.7) River basin where the risk occurs

Select all that apply

- Mississippi River

### (3.1.1.9) Organization-specific description of risk

*The costs associated with water compliance have the potential to increase if the water quality coming into the facility declines. Evergy's generation facilities are permitted to discharge water under the National Pollutant Discharge Elimination System (NPDES) program and each outfall has limitations set by the authorizing agency. The authorizing agency sets limits on the wastewater stream classification, wastewater analysis results, and the receiving stream. As the quality of the receiving stream declines, there is potential for the effluent limits to become harder to achieve, thus increasing costs. For example, temperature is considered a pollutant under the NPDES program. As the receiving water bodies' temperature increases, Evergy will have to consider how to comply with the regulatory limit of the receiving stream. Both discharge temperature and temperature increase limitations exist for all Evergy's once-through cooling facilities as these parameters have been determined to be the threshold for having a potentially significant impact to aquatic life by the regulating agencies. In addition to thermal limitations, Evergy will continue achieving effluent limitations of the pollutants listed in each site-specific NPDES permit.*

### (3.1.1.11) Primary financial effect of the risk

Select from:

- Increased compliance costs

### (3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

### (3.1.1.26) Primary response to risk

#### Compliance, monitoring and targets

Improve monitoring of direct operations

### (3.1.1.27) Cost of response to risk

100000

### (3.1.1.28) Explanation of cost calculation

*Annual cost of staff to enable monitoring and trending to appropriately respond to changing water conditions.*

### (3.1.1.29) Description of response

*Within Evergy's internal Environmental Services department, the water group focuses on water compliance under the NPDES program. Water samples are tracked and reviewed using site specific NPDES permit and limitations. This data is reviewed twice, once when it is received by Environmental Services and a second detailed review takes place prior to the monthly submissions to the applicable regulatory agency. During the detailed review, business analytic tools are used to trend water quality for each pollutant for each outfall. This trending makes it easier for Evergy Environmental Services to identify when pollutants are increasing, near limits, or there are anomalies from historical data. By doing this, Environmental Services can provide feedback to each generation site to help assist in ongoing compliance. Evergy Environmental Services is also in communication with regulatory agencies to collaborate on any compliance related concerns to assist in meeting permit expectations.*

### (3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

Yes

### (3.1.1.25) Explanation of financial effect figure

*Weather conditions directly influence the demand for and price of electricity. The Evergy Companies are significantly impacted by seasonality, and, due to energy demand created by air conditioning load, their highest revenues are typically recorded in the third quarter. Unusually mild winter or summer weather can adversely affect sales. In addition, severe weather and events, including tornados, snow, fire, rain, flooding, drought and ice storms, can be destructive and cause outages and property damage that can result in increased expenses, lower revenues and additional restoration costs. Storm reserves established by the Evergy Companies may be insufficient and rates may not be adjusted in a timely manner, or at all, to recover these costs. Additionally, because many of the Evergy Companies' generating stations utilize water for cooling, low water and flow levels can increase maintenance costs at these stations, result in limited power production and require modifications to plant operations. High water conditions can also impair planned deliveries of fuel to generating stations or otherwise adversely impact the ability of the Evergy Companies to operate these stations. Climate change may produce more frequent or severe weather events, such as storms, droughts or floods. These events could lead to unforeseen changes in water supply quality and create additional costs related to water treatment and complying with environmental discharge requirements. Climate change events could also impact the economic health of the Evergy Companies' service territories. An increase in the frequency or severity of extreme weather events or a deterioration in the economic health of the Evergy Companies' service territories could have a material adverse effect on the results of operations, financial position and cash flows of the Evergy Companies.*

### (3.1.1.27) Cost of response to risk

367900000

### (3.1.1.28) Explanation of cost calculation

*Historical Costs*

### (3.1.1.29) Description of response

*As part of the February 2021 winter weather event, Evergy incurred natural gas and purchased power costs, net of wholesale revenues, of 367.9 million. This 367.9 million of net fuel and purchased power costs was primarily driven by 296.6 million of costs at Evergy Missouri West and 134.3 million of costs at Evergy Kansas Central, partially offset by 63.0 million of net wholesale revenues at Evergy Metro. The Evergy Companies deferred substantially all of the fuel and purchased power costs, net of wholesale revenues, related to the February 2021 winter weather event to a regulatory asset or liability for recovery or refund through the respective fuel recovery mechanisms of Evergy Kansas Central and Evergy Metro and through securitization financing order at Evergy Missouri West. While this financial figure does not represent all potential risks Evergy faces that arise from unpredictable/extreme weather, it was included here as a very specific example of the types of risks Evergy prepares for. The list of risks discussed herein are not exhaustive.*

*Select from:*

Less than 1%

**(3.2.8) % organization's annual electricity generation that could be affected by these facilities**

*Select from:*

26-50%

**(3.2.10) % organization's total global revenue that could be affected**

*Select from:*

Unknown

### (3.2.11) Please explain

*Evergy owns in excess of 900 separate properties including generation facilities, administrative buildings, substations, and warehouses. Four generation facilities have been projected to have extremely high and high risk water stress in 2030 and 2040 due to the potential impact of drought based on the World Resource Institute (WRI) Aqueduct outputs. When compared to the owned properties (including generation facilities) considered part of Evergy's operations, these four facilities represent less than 1% of Evergy's total facilities. When comparing to all Evergy's electric generation sources, including Power Purchase Agreements, the four facilities account for 7.4% of all the electric generation sites. The four facilities are Gordon Evans Energy Center (Gordon Evans), Hutchinson Energy Center (Hutchinson), Jeffrey Energy Center (Jeffrey) and Lawrence Energy Center (Lawrence). These facilities accounted for approximately 16.66% of the total net generation in 2023 and withdrew 3.0% of the total water withdrawn during 2023 for electric generation. Gordon Evans and Hutchinson are combustion turbine (CT) generating stations while both Jeffrey and Lawrence are coal-fired steam generation facilities. With Jeffrey and Lawrence being coal-fired generation sites, they rely on large volumes of water for operations compared to the CT sites. Based on Evergy's most recent Integrated Resource Plan, Lawrence is expected to cease coal operations in 2028; as a result, the volume of water withdrawn for operations at the site is expected to be significantly reduced.*

### (3.6.1.1) Opportunity identifier

*Select from:*

Opp1

### (3.6.1.3) Opportunity type and primary environmental opportunity driver

#### Products and services

Other products and services opportunity, please specify :EE/DSM enables Evergy to provide programs to customers to not only lower demand during peak periods but also drive long-term energy efficiency

### (3.6.1.4) Value chain stage where the opportunity occurs

*Select from:*

Downstream value chain

### (3.6.1.5) Country/area where the opportunity occurs

Select all that apply

- United States of America

### (3.6.1.8) Organization specific description

*The Evergy Companies offer energy efficiency programs to help customers with their energy efficiency needs and to help manage energy costs. Both Missouri (MO) and Kansas (KS) have passed legislation promoting the implementation of cost-effective demand-side management programs and allowing for the recovery of these program costs from customers, along with the potential to earn performance incentives. In MO, Evergy Metro and Evergy Missouri West offer a suite of energy efficiency programs under the Missouri Energy Efficiency Investment Act (MEEIA). The programs were approved by the Missouri Public Service Commission (MPSC) in 2019 and provide for the recovery of program costs, throughput disincentive and the opportunity to earn a performance incentive based upon demand and energy savings achieved. In KS, Evergy Kansas Central and Evergy Kansas Metro requested Kansas Corporation Commission (KCC) authorization in 2021 for a suite of energy efficiency programs under the Kansas Energy Efficiency Investment Act (KEEIA). The KCC approved the agreement pertaining to Evergy's KEEIA request in September 2023. Evergy Kansas Central's and Evergy Metro's proposed programs were approved in early 2024 and are set to expire in 2027. The programs provide for the recovery of program costs, throughput disincentive and the opportunity to earn a performance incentive based upon demand and energy savings. The costs of the program would be recovered from customers through a rider mechanism.*

### (3.6.1.9) Primary financial effect of the opportunity

Select from:

- Other, please specify :increased revenues from sharing cost savings with customers

### (3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

No

### (3.6.1.25) Explanation of cost calculation

N/A

### (3.6.1.26) Strategy to realize opportunity

*Consistent with the MEEIA rules, actual program costs will include the incremental cost of planning, developing, implementing, monitoring, and evaluating demand-side programs. All costs incurred by or on behalf of the collaborative process — including but not limited to costs for incremental consultants, employees, and administrative expenses — are included in the program costs. General administrative costs are included based on the estimated budget for each program. Indirect costs associated with DSM programs — including but not limited to costs of a market potential study and advertising — are included in the program costs. Programs are designated as Residential or Non-Residential and costs associated with each will be recovered by Residential or Non-Residential customers, respectively. Program costs associated with Non-Residential programs will be allocated to customer classes based on kWh from participation by customers from each respective class as determined by the rate code associated with the customers' account. The Non-Residential share of income-eligible program costs and costs of the Online Business Energy Audit program will be allocated based on the proportion of billed kWh sales from each customer class, net of opt-out. Program costs associated with Business Demand Response will be allocated to all rate classes based on the proportion of billed kWh sales from each of those classes. This allocation methodology addresses the inequity of opt-out customers' eligibility to participate in demand response and supports the concept that all customers benefit from the system demand reduction provided by participants in demand response. The costs of the programs are recovered from customers through a rider mechanism.*

Select all that apply

Mississippi River

### (3.6.1.8) Organization specific description

*Evergy has ownership of substantial water rights in its service territory at locations that previously had facilities to generate electricity but have since been retired. In the State of Kansas, water is a real property right limited based on availability and required to be utilized and maintained to retain ownership. Water availability in southern Kansas is limited to current water right holders in many areas due to inability to obtain new rights. With the changing landscape of electricity generation and advancement of technology, the availability of these rights for future use is a substantial opportunity. Due to this opportunity, Evergy has modified its company's water strategies to protect and maintain these rights. To maintain these rights while considering what future opportunities are available, Evergy may consider placing the rights into short term conservation agreements.*

### (3.6.1.9) Primary financial effect of the opportunity

Other, please specify :Performance-Based Restricted Stock Units (RSUs)

### (4.5.1.3) Performance metrics

#### Strategy and financial planning

Other strategy and financial planning-related metrics, please specify :Addition of wind and solar generation (megawatts constructed and in-service or power purchase agreement buyouts under contract).

### (4.5.1.4) Incentive plan the incentives are linked to

Select from:

Long-Term Incentive Plan, or equivalent, only (e.g. contractual multi-year bonus)

### (4.5.1.5) Further details of incentives

*The goals, targets, and results of our 2023 executive incentive plans are disclosed in our 2024 proxy statement. The 2023 compensation plan continued to support our strategic business plan with metrics similar to our 2022 metrics and targets focused on continued year-over year improvement. For 2023, the Long-term Incentive Plan included an environmental metric based on total megawatts of owned renewables additions by year-end 2024 or buy-ins of purchase power agreements.*

### (4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

*Evergy's Corporate executive team is incentivized to execute the generation transition strategy. Executive compensation under the company's long-term incentive plan (LTIP) is based in part on a metric that measures total megawatts of owned renewable additions or buy-ins of purchased power agreements by year-end 2024 (for the 2022 LTIP Plan) and by year-end 2025 (for the 2023 LTIP Plan). This executive compensation plan supports the company's generation transition strategy.*

## Water

### (4.5.1.1) Position entitled to monetary incentive

#### Board or executive level

Other C-Suite Officer, please specify :Chief Executive Officer, General Counsel, Chief Technology Officer, Chief Financial Officer, Chief Operating Officer, Chief Customer Officer, Chief Human Resources Officer, Corporate executive team

### (4.5.1.2) Incentives

Select all that apply

- Bonus – set figure
- Other, please specify :Performance-Based Restricted Stock Units

### (4.5.1.3) Performance metrics

#### Resource use and efficiency

- Reduction of water withdrawals – direct operations
- Reduction in water consumption volumes – direct operations

### (4.5.1.4) Incentive plan the incentives are linked to

Select from:

- Long-Term Incentive Plan, or equivalent, only (e.g. contractual multi-year bonus)

### (4.5.1.5) Further details of incentives

*The goals, targets, and results of our 2023 executive incentive plans are disclosed in our 2024 proxy statement. The 2023 compensation plan continued to support our strategic business plan with metrics similar to our 2022 metrics and targets focused on continued year-over year improvement. For 2023, the Long-term Incentive Plan included an environmental metric based on total megawatts of owned renewables additions by year-end 2024 or buy-ins of purchase power agreements.*

### (4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

*Evergy's executive team has a new Long-term Incentive Plan metric based on total megawatts of renewables by year end 2024 and year end 2025. With renewable generation (solar and wind) not dependent on water, for generation of electricity, this metric is incentivizing the reduction of water withdrawals and water consumption.*  
[Add row]

### (4.6) Does your organization have an environmental policy that addresses environmental issues?

	Does your organization have any environmental policies?
	<i>Select from:</i> <input checked="" type="checkbox"/> Yes

#### **(4.11.7) Disclose the transparency registers on which your organization is registered & the relevant ID numbers for your organization**

*Federal Election Commission; Kansas Governmental Ethics Commission; Missouri Governmental Ethics*

#### **(4.11.8) Describe the process your organization has in place to ensure that your external engagement activities are consistent with your environmental commitments and/or transition plan**

*Through an Integrated Resource Plan (IRP) process that included stakeholder input, Evergy completed an analysis of future resource needs and scenarios to support the company's transition toward a lower carbon future, advancing goals of affordability, reliability, and sustainability. This plan was reviewed and approved by the Board of Directors (Board). The results are used to align operational and financial decisions and engagement and communication with stakeholders. To ensure strategy alignment and execution, the company has an engaged Board. The Board has responsibility to direct, oversee, and monitor the performance of management, who are charged with conducting the day-to-day business of the Company. The Board fulfills their responsibilities consistent with their fiduciary duties, and in compliance with all applicable laws and regulations. Directors may take into consideration the interests of other stakeholders, including customers, employees,*

and community members. The Board oversees that the assets and operations of the Company are managed and safeguarded. Evergy has a Board committee – the Nuclear, Power Supply and Environmental Committee – that has a focus on environmental matters and risks related to power supply resources, including those related to climate. This committee monitors environmental policy and planning issues, including those with respect to local, state, and federal air, water, electric, environmental, and waste matters; reviews any environmental reports prepared; and is involved with shareholder engagement on environmental matters. For a full description of Evergy’s governance structure relating to environmental matters, please refer to Governance. Evergy’s senior leadership team meets weekly; the frequency of meetings ensures alignment across the organization as we execute our sustainability strategy. To help ensure consistent messaging across our sustainability engagement activities, Evergy has established a management structure to oversee and drive ESG matters, including messaging and reporting. In 2021, for performance years 2022-2024, we added an environmental metric to the Long-term Incentive Plan, based on total megawatts of owned renewables additions by year-end 2024 or buy-ins of purchase power agreements. This metric is to incent our achievement of renewable additions and progress towards our sustainability strategy as supported by our IRP process.

[Fixed row]

### **(4.11.1) On what policies, laws, or regulations that may (positively or negatively) impact the environment has your organization been engaging directly with policy makers in the reporting year?**

#### **Row 1**

#### **(4.11.1.1) Specify the policy, law, or regulation on which your organization is engaging with policy makers**

*New Source Performance Standards (NSPS) for Greenhouse Gas (GHG) emissions from New, Modified, and Reconstructed Fossil Fuel-Fired Electric Generating Units (EGUs) and the Emission Guidelines for GHG emissions from Existing EGUs.*

#### **(4.11.1.2) Environmental issues the policy, law, or regulation relates to**

*Select all that apply*

- Climate change

#### **(4.11.1.3) Focus area of policy, law, or regulation that may impact the environment**

##### **Environmental impacts and pressures**

- Emissions – CO2
- Emissions – other GHGs
- Other environmental impacts and pressures, please specify :Renewable energy generation, New fossil fuel energy generation capacity

#### (4.11.1.4) Geographic coverage of policy, law, or regulation

Select from:

- National

#### (4.11.1.5) Country/area/region the policy, law, or regulation applies to

Select all that apply

- United States of America

#### (4.11.1.6) Your organization's position on the policy, law, or regulation

Select from:

- Support with major exceptions

#### (4.11.1.7) Details of any exceptions and your organization's proposed alternative approach to the policy, law, or regulation

*At this time, we take exception to the compliance deadlines for installing carbon capture and sequestration (CCS) to existing and new electric generating units. CCS is not adequately demonstrated today as it is not deployable, available, or affordable across the entirety of the electric utility industry, and the attendant supporting infrastructure will take more time than EPA predicts to deploy. This assessment factors in the compliance timelines for EPA standards that are not applicable until several years in the future. Accordingly, we have significant concerns about the achievability of the proposed standards.*

#### (4.11.1.8) Type of direct engagement with policy makers on this policy, law, or regulation

Select all that apply

- Regular meetings
- Ad-hoc meetings
- Discussion in public forums
- Participation in working groups organized by policy makers

#### (4.11.1.10) Explain the relevance of this policy, law, or regulation to the achievement of your environmental commitments and/or transition plan, how this has informed your engagement, and how you measure the success of your engagement

Natural gas generation will be a bridge fuel as the company relies less on coal while meeting growing electric demand in an affordable, reliable, sustainable way, as we also make provisions for eventual retirement of coal facilities that will not harm consumers financially. Acceleration of existing coal facility retirements, as a result of compliance with the GHG guidelines, could impact this balance we strive to achieve for our customers.

#### **(4.11.1.11) Indicate if you have evaluated whether your organization's engagement on this policy, law, or regulation is aligned with global environmental treaties or policy goals**

Select from:

No, we have not evaluated

[Add row]

#### **(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.**

##### **Row 1**

#### **(4.11.2.1) Type of indirect engagement**

Select from:

Indirect engagement via a trade association

#### **(4.11.2.4) Trade association**

##### **North America**

Edison Electric Institute (EII)

#### **(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position**

Select all that apply

Climate change

Water

#### (4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

Consistent

#### (4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

Yes, we publicly promoted their current position

#### (4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

*Evergy employees serve on multiple EEI committees and in leadership positions on these committees. EEI is the association that represents all U.S. investor-owned electric companies. EEI provides public policy leadership, strategic business intelligence, and essential conferences and forums. EEI's member companies are leading a clean energy transformation. We are united in our commitment to get the energy we provide as clean as we can as fast as we can, without compromising on the reliability or affordability that are essential to the customers and communities we serve. EEI's member companies are committed to continuing to reduce carbon emissions in our sector and to helping other sectors, particularly the transportation and industrial sectors—transition to clean, efficient electric energy. One example of a policy position Evergy supports and has been instrumental in moving forward: In December 2021, EEI launched the National Electric Highway Coalition (NEHC), a collaboration among electric companies, including Evergy, that are committed to providing EV fast charging stations allowing the public to drive EVs with confidence along major U.S. travel corridors by the end of 2023. The NEHC is the largest such alliance of electric companies that have organized around the goal of deploying EV fast charging infrastructure to support the growing number of EVs and ensure that the transition to EVs is seamless for drivers. The Evergy Clean Charge Network consists of over 1,000 electric vehicle charging stations in Kansas City – one of the largest of any city in the United States. Evergy filed 5-year program plans of 12.8 million in Missouri and 19.7 million in Kansas to help customers with costs related to purchasing an EV or electrifying their fleets. The program filing includes several aspects focused on education, rebate programs, clean charge network expansion to underserved areas, and time of use tariffs. To further reduce vehicle emissions, Evergy's goal is that 100 percent of new light-duty vehicle purchases by 2030 will be electric. In addition, Evergy has a goal that 35 percent or more of our overall vehicle fleet including light-duty, medium-duty, heavy-duty, forklifts, and small utility vehicles be electrified by 2030.*

#### (4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

No, we have not evaluated

## C5. Business strategy

(5.1) Does your organization use scenario analysis to identify environmental outcomes?

### Water

#### (5.1.1) Use of scenario analysis

Select from:

Yes

#### (5.1.2) Frequency of analysis

Select from:

Annually

[Fixed row]

(5.1.1) Provide details of the scenarios used in your organization's scenario analysis.

### Water

#### (5.1.1.1) Scenario used

##### Physical climate scenarios

Customized publicly available climate physical scenario, please specify :RCP 4.5 and RCP 8.5

#### (5.1.1.3) Approach to scenario

Select from:

Qualitative and quantitative

#### (5.1.1.4) Scenario coverage

Select from:

- Facility

#### (5.1.1.5) Risk types considered in scenario

Select all that apply

- Acute physical
- Chronic physical

#### (5.1.1.6) Temperature alignment of scenario

Select from:

- 1.6°C - 1.9°C

#### (5.1.1.7) Reference year

2022

#### (5.1.1.8) Timeframes covered

Select all that apply

- 2030
- 2040
- 2050
- 2060

#### (5.1.1.9) Driving forces in scenario

**Local ecosystem asset interactions, dependencies and impacts**

- Changes to the state of nature
- Speed of change (to state of nature and/or ecosystem services)

### (5.1.1.10) Assumptions, uncertainties and constraints in scenario

*Evergy completed a WRA in early 2022, during which data was reviewed for both the Representative Concentration Pathway (RCP)4.5 and RCP8.5 emissions scenarios. These RCPs were chosen to align with a scenario limiting global warming to 2C (RCP4.5) and a scenario where there are increased physical risks due to extremely high emissions (RCP8.5). Using these scenarios is considered best practice, as it shows the worst-case approach and a lower emissions scenario. A mid-century timeframe was chosen to align with life of existing energy infrastructure. Exact timeframes vary between tools, generally between 2030-2065. Tools and resources being reviewed for Evergy's Resilience assessment include: • U.S. Global Climate Research Program's National Climate Assessment/associated Localized Constructed Analogs datasets • National Oceanic and Atmospheric Administration State Climate Summaries • World Resource Institute Aqueduct Water Risk Atlas • United States Army Corps of Engineers Climate Hydrology Assessment Tool • U.S. Drought Monitor • U.S. Bureau of Reclamation Drought Dashboard.*  
[Add row]

### (5.1.2) Provide details of the outcomes of your organization's scenario analysis.

#### Water

#### (5.1.2.1) Business processes influenced by your analysis of the reported scenarios

*Select all that apply*

- Risk and opportunities identification, assessment and management
- Resilience of business model and strategy

#### (5.1.2.2) Coverage of analysis

*Select from:*

- Organization-wide

#### (5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

*The water-related outcomes will drive discussion and planning on how best to mitigate water-related risks. Operational actions currently being taken are monthly tracking of water consumption for individual energy centers and modification of key river intakes to lower intake levels to become more drought resilient. Through the water tracking and the newly completed WRA, Evergy has more information to make strategic water planning decisions such as how to manage the water rights in Kansas and participation in water marketing contracts through the Kansas Water Office. The IRP was used to specifically assess water-related outcomes through Evergy's generation fleet transition away from coal. Findings from Evergy's WRA will be considered in future water and generation planning. Evergy has carbon reduction goals of net-zero by 2045, assuming enabling technologies and supportive public policies are in place, and a 70% reduction in carbon emissions compared to 2005 levels through 2030. These goals, and Evergy's resource plan analysis, are informed by EPRI research and the Paris Climate Agreement and align with*

global CO2 pathways consistent with limiting warming to 2 Degrees Celsius (Figure 2, from Rose and Scott-2018). Please refer to 'Metrics and Targets' section of Evergy's TCFD report found here: [evergy.com/TCFD](http://evergy.com/TCFD).

[Fixed row]

### **(5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?**

#### **(5.3.1) Environmental risks and/or opportunities have affected your strategy and/or financial planning**

Select from:

- Yes, both strategy and financial planning

#### **(5.3.2) Business areas where environmental risks and/or opportunities have affected your strategy**

Select all that apply

- Products and services
- Upstream/downstream value chain
- Investment in R&D
- Operations

[Fixed row]

### **(5.3.1) Describe where and how environmental risks and opportunities have affected your strategy.**

#### **Products and services**

##### **(5.3.1.1) Effect type**

Select all that apply

- Opportunities

##### **(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area**

Select all that apply

- Climate change

- Water

### **(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area**

*Evergy's strategy for specific products and services is informed by climate-related risks. Evergy has implemented, and continues to offer, energy efficiency programs to help customers with their energy efficiency needs and to manage energy costs. Both Missouri and Kansas have passed legislation promoting the implementation of cost-effective demand-side management programs allowing for the recovery of these program costs from customers, along with the potential to earn performance incentives based upon certain criteria. In Missouri, Evergy currently offers energy efficiency programs for customers under the Missouri Energy Efficiency Investment Act (MEEIA). The current portfolio of programs was approved by the Missouri Public Service Commission (MPSC) in 2019 and provides for the recovery of program costs, throughput disincentive and the opportunity to earn a performance incentive based upon demand and energy savings achieved. The costs of the programs are recovered from customers through a rider mechanism. The current MEEIA programs as authorized by the MPSC expire at the end of 2024. Evergy has submitted a filing to extend the MEEIA program beyond the 2024 period. In Kansas, Evergy Kansas Central and Evergy Kansas Metro requested Kansas Corporation Commission (KCC) authorization in December 2021 for a suite of energy efficiency programs for customers under the Kansas Energy Efficiency Investment Act (KEEIA). The KCC approved the settlement agreement pertaining to Evergy Kansas Central's and Evergy Metro's KEEIA request on September 1, 2023. Evergy Kansas Central's and Evergy Metro's proposed programs were approved in early 2024 and are set to expire in 2027. These programs provide for the recovery of program costs, throughput disincentive and the opportunity to earn a performance incentive based upon demand and energy savings achieved. The costs of the program would be recovered from customers through a rider mechanism. These programs help reduce GHG emissions, lower costs for consumers, and improve our relationship with our customers. In addition to Demand Side Management programs, Evergy offers tariffs, which allow customers to receive dedicated, 100% renewable service (Renewables Direct, RENEW, Solar Subscription Riders) from Evergy's renewable resources.*

## **Upstream/downstream value chain**

### **(5.3.1.1) Effect type**

*Select all that apply*

- Risks
- Opportunities

### **(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area**

*Select all that apply*

- Climate change
- Water

### **(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area**

*Upstream/downstream value chain: Evergy is a member of the Electric Utility Industry Sustainable Supply Chain Alliance (EUISSCA) which is a collaboration between utilities and suppliers to advance sustainable best practices in supply chain. EUISSCA has created an assessment for suppliers to disclose sustainability information, which includes a number of climate-specific items. In addition to disclosure, the assessment asks suppliers to indicate actions they are willing to take to improve sustainability. Suppliers from our top two tiers were selected for the assessment. Tiers are determined by several factors, but primarily focus on suppliers with the highest spend totals and largest impacts on Evergy's core business areas. The survey tool has customized questions for over 23 supplier designations that ask a variety of questions, from the details of a supplier's operational controls to the level of leadership engagement and commitment to sustainability. It also offers benchmarking, which enables suppliers to make improvements based on best practices. We are using the results of the survey to help us further identify sustainability risks associated with our current suppliers and potential future business partners. While the assessment is voluntary, suppliers are incentivized to participate because the assessment offers industry-specific benchmarking information. In return for participating, the supplier receives a free best-practice road map that they can use to improve operations and performance.*

## Investment in R&D

### (5.3.1.1) Effect type

*Select all that apply*

Opportunities

### (5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

*Select all that apply*

Climate change

Water

### (5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

*Investment in R&D: Evergy's R&D investment includes partnership with Electric Power Research Institute (EPRI). Evergy provides funding and is involved in EPRI's research in electrification and EPRI's Climate Resilience and Adaptation Initiative (READi) among several other focus areas. In addition to the EPRI partnership, Evergy continues to research emission free technologies and complete studies related to generation site locations to continue to transition Evergy's generation fleet. Evergy Ventures (a subsidiary) is a partner with Energy Impact Partners (EIP) and has a variety of direct investments in early-stage start-up companies in the energy space. Evergy Ventures activities allow Evergy to stay on the forefront of the development of the grid of the future and customer technology to enable the cost-effective transition to a lower carbon future.*

## Operations

### (5.3.1.1) Effect type

Select all that apply

- Risks
- Opportunities

### (5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- Climate change
- Water

### (5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

*Operations: Evergy utilizes transmission and distribution equipment and construction standards that prepare our system to be resilient against future climate-related changes. Evergy has implemented asset management programs for its transmission and distribution systems to proactively test and replace components before failure due either to age or significant weather events. Transmission line project designers may deploy metal structures in grasslands and pastures that are prone to fire, which reduces the risk of damage to our infrastructure and surrounding property and increases the power grid's reliability. Evergy also invests significant resources in managing the vegetation that surrounds its infrastructure. Evergy plans to invest about 3.1 billion in transmission resiliency from 2024-2028; these investments will support the continued interconnection of renewables and help to strengthen the resiliency of the system and its ability to withstand extreme weather. A key part of Evergy's evolution is the expected transition of our generating fleet to rely less heavily on fossil fuels and as a result also rely less on water. Our most recent integrated resource plan (IRP) outlines our intention to add more than 6,300 megawatts (MW) of renewable energy and retire more than 2,000 MW of coal-based fossil generation by 2035. Additionally, Evergy has established carbon reduction goals of net-zero by 2045, assuming enabling technologies and supportive public policies are in place, and a 70% reduction in carbon emissions compared to 2005 levels through 2030 as part of an overall strategy focused on affordability, reliability, and sustainability, building on progress to-date of an approximate 50% reduction in carbon emissions relative to 2005. The IRP also identified the need for approximately 3,400 MW of new technologies which can provide non-emitting, dispatchable service to maintain reliability and manage climate change risk beyond 2035. Evergy also continues to focus on making its fossil fleet more efficient and flexible. This flexibility allows the fossil units to provide back-up support to renewable resources as they continue to be interconnected, while reducing carbon emissions caused by fossil operational constraints (min run times, economic minimums, etc.).*  
[Add row]

### (5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning.

#### Row 1

#### (5.3.2.1) Financial planning elements that have been affected

Select all that apply

- Assets
- Revenues
- Liabilities
- Direct costs
- Indirect costs

- Access to capital
- Capital allocation
- Capital expenditures

### (5.3.2.2) Effect type

Select all that apply

- Risks
- Opportunities

### (5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- Climate change

### (5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

*Revenues: The majority of Evergy's revenues are rate-regulated. In addition, its MEEIA and KEEIA programs encourage energy efficiency, demand response, and electrification. Evergy makes strategic decisions related to these revenue drivers with a goal of balancing both customer and shareholder risks, including climate-related risks. Evergy has also experienced opportunities around economic development with customers looking to locate in Evergy's service territory to take advantage of Evergy's renewable resources. Evergy has also entered into various agreements to construct solar facilities for co-ops and municipalities and behind the meter solar solutions for existing retail customers. Direct Costs: We recognize there is a direct relationship between vegetation management and system reliability, particularly as physical climate-related risks continue to materialize in the context of more extreme weather events. As a result, Evergy has integrated vegetation management strategies into its resiliency planning. Capital Expenditures and Assets: As stated in the Company's 2023 IRP update, over the next 10 years Evergy plans to invest in nearly 4,800 MW of new generation, of which 3,100 MW are renewable generation. The company also expects to retire over 1,900 MW of coal generation during this same time frame. Capital Allocation: A key driver of Evergy's capital allocation process is through development and approval of its IRP, which informs the level of investment in both renewable and traditional generation, along with generator retirements. Evergy's IRP process utilizes key transition and physical risk considerations to inform our capital allocation strategy. Liabilities: Stranded asset value of existing coal generators continues to be a risk that Evergy is actively managing. In both Missouri and Kansas, legislation has been enacted that authorize the potential securitization of costs associated with assets that are retired before they are fully depreciated, through processes that will be overseen by the regulatory commissions in each state. Access to capital: Evergy continues to provide more information to investors and other stakeholders that are interested in climate-related risks. To tie our goal of lower carbon emissions to our financial*

performance and cost of short-term capital, in 2021, Evergy amended and restated its 2.5 billion master credit facility, with certain pricing based on diversity and non-emitting carbon generation goals.

[Add row]

## **(5.5) Does your organization invest in research and development (R&D) of low-carbon products or services related to your sector activities?**

### **(5.5.1) Investment in low-carbon R&D**

Select from:

Yes

### **(5.5.2) Comment**

*Solar PV: Evergy's Solar Subscription programs provide standard and income-eligible customers with renewable energy solutions through a local community-based initiative without the hassle of installing and maintaining solar. Evergy offers Solar Subscription in Missouri and Kansas. The Global Investor Coalition on Climate Change Low Carbon Investment (LCI) Registry Taxonomy clearly identifies both Wind and Solar Energy investments as included categories. Wind Power: Evergy's green tariff program, Renewables Direct, offers large commercial and industrial customers a turn-key solution to obtain wind energy. The Global Investor Coalition on Climate Change Low Carbon Investment (LCI) Registry Taxonomy clearly identifies both Wind and Solar Energy investments as included categories.*

[Fixed row]

## **(5.5.7) Provide details of your organization's investments in low-carbon R&D for your sector activities over the last three years.**

**Row 1**

**(5.9) What is the trend in your organization's water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?**

#### (5.9.1) Water-related CAPEX (+/- % change)

-22

#### (5.9.2) Anticipated forward trend for CAPEX (+/- % change)

**(5.9.3) Water-related OPEX (+/- % change)**

28

**(5.9.4) Anticipated forward trend for OPEX (+/- % change)**

-23

**(5.9.5) Please explain**

CAPEX for water-related projects includes wastewater treatment system upgrades, coal combustion residual impoundment closures, conversion to dry ash handling, groundwater monitoring system installations, and 316(b) compliance measures. These expenditures continued to decrease from 2022 to 2023 as projects ramp down at our coal-fired energy centers. Water related CAPEX is expected to increase in 2024, and then decrease again in 2025 as projects are completed. Water OPEX includes chemical treatment of process water, wastewater treatment, and water fees. OPEX costs are expected to decrease, as coal generation resources are expected to remain in place over the next two years; however, the capacity factor on those units are expected to continue to decrease. the cost of water treatment chemicals increased 28% from 2022 to 2023 due to demand & inflation.

### (5.11.7.3) Type and details of engagement

#### Capacity building

- Provide training, support and best practices on how to measure GHG emissions

#### Information collection

- Collect GHG emissions data at least annually from suppliers
- Other information collection activity, please specify :Collect other climate related information at least annually from suppliers

### (5.11.7.4) Upstream value chain coverage

*Select all that apply*

- Tier 1 suppliers
- Tier 2 suppliers

### (5.11.7.5) % of tier 1 suppliers by procurement spend covered by engagement

*Select from:*

- 51-75%

### (5.11.7.6) % of tier 1 supplier-related scope 3 emissions covered by engagement

*Select from:*

- Unknown

### (5.11.7.8) Number of tier 2+ suppliers engaged

16

### (5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

Evergy is a member of the Electric Utility Industry Sustainable Supply Chain Alliance (EUISSCA), a collaboration between utilities and suppliers to advance sustainable best practices in supply chain. EUISSCA administers an annual supplier assessment. Our 2022 and 2023 assessment included 50 and 51 suppliers respectively, which represented approximately 61 % of our annual managed spend. Suppliers from our top two tiers, designated by several factors including the highest spend totals and largest impacts on our core business areas, were selected. The survey tool has customized questions for over 23 supplier types that ask a variety of questions, from the details of a supplier's operational controls to the level of leadership engagement and commitment. It also offers benchmarking and can be used for sharing best practices. Survey results help us identify risks associated with current suppliers and potential future business partners. Suppliers are incented to participate because this voluntary assessment offers industry-specific benchmarking information. In return for participating, the supplier receives a free best-practice road map that they can use to improve operations and performance. EUISSCA has created an assessment for suppliers to disclose sustainability information, which includes several climate-specific items. In addition to disclosure, the assessment asks suppliers to indicate actions they are willing to implement for sustainability improvement. Survey results for 2023 are as follows: 51 suppliers were selected to complete the survey. These 51 suppliers are Tier 1 and Tier 2 suppliers. Of the invited suppliers, 34 completed the survey surpassing the 50% internal threshold goal. The survey, tailored to different categories of suppliers, focuses on an initial assessment of sustainability performance and programs, with tools provided to aid in the identification and implementation of performance improvement opportunities. This effort helps us to work collaboratively with suppliers to advance performance in the most relevant areas for each type of supplier for the services or materials they are providing with the intent to use results as new baseline data to continue engaging with suppliers and push for improved performance. In 2023, we also collaborated with EUISSCA to invite all of our suppliers to GHG workshops targeted to those that may not have the resources or expertise to understand or begin to approach their emissions and other GHG issues.

#### **(5.11.7.11) Engagement is helping your tier 1 suppliers engage with their own suppliers on the selected action**

#### **(5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain.**

##### **Climate change**

#### **(5.11.9.1) Type of stakeholder**

Select from:

Customers

#### **(5.11.9.2) Type and details of engagement**

##### **Education/Information sharing**

Educate and work with stakeholders on understanding and measuring exposure to environmental risks

- Share information on environmental initiatives, progress and achievements

### (5.11.9.3) % of stakeholder type engaged

Select from:

- Unknown

### (5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

- Unknown

### (5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

*Evergy is committed to empowering a better future for our customers and communities. Making a positive impact in the communities we call home is a foundational component of our business. We partner with many community organizations to move sustainability and a lower carbon environment forward, as part of an overall focus on affordability, reliability, and sustainability. Below are a few examples: Evergy is working to lower the heat index along the Independence Boulevard of Kansas City, Missouri (KCMO) through its Urban Heat Island program. Evergy's Green Team and employee volunteers are partnering with the Housing Authority of Kansas City, KCMO and other agencies for the first phase of the project to plant and maintain 1,700 trees by the end of 2025. Partnering with Bridging the Gap and National Arbor Foundation to distribute young trees and information about how to plant them around homes to provide energy savings for years to come. Additionally, Evergy's Green Team partners with these organizations to provide and plant young trees and native vegetation in communities throughout its service territory. Supporting the Kansas City (KC), Missouri benchmarking ordinance by providing building owners with multiple tenants the ability to aggregate information and gain an Energy Star score as the first step to identifying energy savings opportunities for large buildings. Providing financial and technical support to local transit authorities as they take initial steps toward electrifying their bus fleets. Along with several other regional utilities, Evergy has signed a memorandum of cooperation to promote the construction of the Midwest multi-state coordinated foundational electric vehicle charging network. The objective is to foster public confidence and provide convenient, fast-charging resources for EVs traveling long distances throughout the Midwest.*

### (5.11.9.6) Effect of engagement and measures of success

*Success is measured by the engagement of customers and communities in the activities and the positive impact experienced from their engagement.*

## Water

### (5.11.9.1) Type of stakeholder

Select from:

- Other value chain stakeholder, please specify :Peer water users

### (5.11.9.2) Type and details of engagement

#### Education/Information sharing

- Educate and work with stakeholders on understanding and measuring exposure to environmental risks
- Share information on environmental initiatives, progress and achievements

### (5.11.9.3) % of stakeholder type engaged

Select from:

- Unknown

### (5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

*Evergy engages with partners within the water value chain. The rationale and strategy for engagement with key stakeholders are to focus on stakeholders that rely on the same water resources as Evergy. Evergy does this through collaboration with other major water users and water-related committees. Evergy's Jeffrey, Lawrence, and LaCygne facilities are members Water Assurance District (WADs). These WADs are comprised of major water users along the specified rivers that financially contribute to have upstream storage of water in reservoirs. This engagement assists Evergy in securing water supply during periods of drought. In addition to the WAD, Evergy employees are members of water Regional Advisory Committees (RACs). In KS, there are fourteen RACs that focus on basin specific goals such as nutrient loading, reservoir sedimentation, and streambank stabilization. By employees being members of RACs in key basins, they are able to engage with several stakeholders in the community on water related topics. Some Evergy facilities acquire water through the Water Marketing Program (Program) in Kansas. The Program allows facilities to buy water directly from state-controlled reservoirs. Evergy actively engages with and serves as an advisory member to the Kansas Public Water Supply Committee that reports to the Kansas Water Authority. Participation with this committee allows Evergy to contribute to and be aware of factors influencing water availability and pricing within the Program.*

### (5.11.9.6) Effect of engagement and measures of success

*The measure of success in this partnership is the successful management of the available water resources and the assurance of water availability during drought conditions.*

## Climate change

### (5.11.9.1) Type of stakeholder

### (5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

*Evergy is committed to empowering a better future for our customers and communities. Making a positive impact in the communities we call home is a foundational component of our business. We partner with many community organizations to move sustainability and a lower carbon environment forward, as part of an overall focus on affordability, reliability, and sustainability. Below are a few examples: As our industry works to eliminate carbon emissions associated with our energy supply and work processes, reliance on nature-based climate solutions, or offsets will be increasingly valuable. Our strategy to achieve our 2045 net-zero goal, assuming enabling technologies and supportive public policies are in place, requires that Evergy be forward-thinking in our short-term investments today. More than 7 million acres in the Great Plains have been protected from tillage under the USDA Conservation Reserve Program (CRP). These acres have historically sequestered significant amounts of carbon and many acres are at risk of “aging out” of the established CRP program. As this happens, it is possible that the Great Plains region could lose significant acres of prairie grass and stored soil carbon. Evergy is enabling a feasibility study that involves research regarding modeling and certifying offsets, establishing processes, and reviewing economic impacts of establishing a conservation reserve program on these acres that would exist in perpetuity. Kansas State University is conducting this feasibility study with other partners, providing support as needed. Using these acres to create legitimate, certifiable offset credits in a permanent conservation program provides climate change mitigation and ecological benefits across millions of CRP acres in the Great Plains.*

### (5.11.9.6) Effect of engagement and measures of success

Success is measured by the engagement of customers and communities in the activities and the positive impact experienced from their engagement.

## Climate change

### (5.11.9.1) Type of stakeholder

Select from:

- Customers

### (5.11.9.2) Type and details of engagement

#### Education/Information sharing

- Educate and work with stakeholders on understanding and measuring exposure to environmental risks
- Share information about your products and relevant certification schemes

### (5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

Evergy is committed to empowering a better future for our customers and communities. Making a positive impact in the communities we call home is a foundational component of our business. We partner with many community organizations to move sustainability and a lower carbon environment forward, as part of an overall focus on affordability, reliability, and sustainability. Below are a few examples: Climate Action Kansas City's Regional Building Energy Exchange (BE-Ex) will serve as a "one-stop-shop" to fast-track implementation of known innovative solutions and emerging trends for the built environment. Climate Action Kansas City (CAKC) is a compact of elected officials and community leaders that works throughout the KC region to reduce or mitigate greenhouse gases and improve climate resilience. The BE-Ex brings world class resources, direct assistance, and tangible value to the current and future owners and occupants of KC buildings. This program aims to provide direct support and financing services to building owners, policy makers, property managers, architects, engineers, and others in the KC metro area to promote a high performance-built environment to help the region meet its ambitious climate goals, create jobs, accelerate innovation, and grow its economy. Evergy

*has provided a grant to support this program and is actively engaged with CAKC in the strategic planning stage of this initiative. Since 1989, our volunteer, employee-driven Green Team has completed thousands of projects including; restoring hundreds of acres of wetlands, thousands of acres of prairie, and planting more than 30,000 trees. The Green Team partners with agencies, non-profits, and schools, to protect, preserve, and educate. With the help of Evergy's sponsorship and the Green Team's volunteer work, native organization MO Hives KC was able to advance their mission to educate and involve urban residents in the creation, preservation, and expansion of pollinator habitats in the KC metro area, utilizing vacant land to support community health and wellness.*

#### **(5.11.9.6) Effect of engagement and measures of success**

*Success is measured by the engagement of customers and communities in the activities and the positive impact experienced from their engagement.*

## C6. Environmental Performance - Consolidation Approach

(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.

	Consolidation approach used
Climate change	<i>Select from:</i> <input checked="" type="checkbox"/> Equity share

*[Fixed row]*

## C7. Environmental performance - Climate Change

**(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?**

	Has there been a structural change?
	Select all that apply <input checked="" type="checkbox"/> No

[Fixed row]

**(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?**

	Change(s) in methodology, boundary, and/or reporting year definition?
	Select all that apply <input checked="" type="checkbox"/> No

[Fixed row]

**(7.3) Describe your organization's approach to reporting Scope 2 emissions.**

### (7.3.1) Scope 2, location-based

Select from:

We are reporting a Scope 2, location-based figure

### (7.3.2) Scope 2, market-based

Select from:

We are reporting a Scope 2, market-based figure

### (7.3.3) Comment

*Scope 2 (market-based). These emissions were calculated using actual kWh purchases (when available) and supplier specific emission factors when available, or from national average CO2 emissions factors derived from electric sector emissions and generation data when supplier specific data is not available. Scope 2 (location—based). These emissions were calculated using actual kWh purchases (when available) and national average CO2 emissions factors derived from electric sector emissions and generation data.*

*[Fixed row]*

**(7.4.1) Provide details of the sources of Scope 1, Scope 2, or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure.**

**Row 1**

#### (7.4.1.1) Source of excluded emissions

*Scope 1 emissions identified by The Climate Registry as “de minimis” for electric power sector*

#### (7.4.1.2) Scope(s) or Scope 3 category(ies)

Select all that apply

Scope 1

#### (7.4.1.3) Relevance of Scope 1 emissions from this source

Select from:

Emissions are not relevant

#### (7.4.1.10) Explain why this source is excluded

*These items were identified by The Climate Registry as de minimis for the applicable sector and are not considered material to the current GHG inventory.*

#### (7.4.1.11) Explain how you estimated the percentage of emissions this excluded source represents

*Per The Climate Registry General Reporting Protocol (TCR GRP) and Electric Power Sector Protocol, there are a number of de-minimis sources for the electric utility industry that are not included in our Scope 1 inventory. Evergy has determined that the assumptions and recommendations of the TCR GRP and Electric Power Sector Protocol are applicable in Evergy's case. The value estimated is less than a fraction of one percent of the total Scope 1 inventory.*

### Row 2

#### (7.4.1.1) Source of excluded emissions

*HVAC equipment with a charge less than 50lbs*

#### (7.4.1.2) Scope(s) or Scope 3 category(ies)

Select all that apply

Scope 1

#### (7.4.1.3) Relevance of Scope 1 emissions from this source

Select from:

Emissions are not relevant

#### (7.4.1.10) Explain why this source is excluded

*As a utility provider, most of our emissions are reported within our Scope 1 for generation. The exclusion of refrigerant emissions is not considered material to the current GHG inventory.*

#### (7.4.1.11) Explain how you estimated the percentage of emissions this excluded source represents

Emissions were estimated based on units greater than 50-pound charge and found to be de minimis accounting to less than a fraction of one percent of our overall scope 1 emissions. These are not considered material to the current GHG inventory. Evergy will re-assess the materiality of these emission once we reach our emission reduction goals.

### Row 3

#### (7.4.1.1) Source of excluded emissions

Emergency equipment (Fire pumps and Electric generators)

#### (7.4.1.2) Scope(s) or Scope 3 category(ies)

Select all that apply

Scope 1

#### (7.4.1.3) Relevance of Scope 1 emissions from this source

Select from:

Emissions are not relevant

#### (7.4.1.10) Explain why this source is excluded

As a utility provider, most of our emissions are reported within our Scope 1 for generation. The exclusion of refrigerant emissions is not considered material to the current GHG inventory.

#### (7.4.1.11) Explain how you estimated the percentage of emissions this excluded source represents

Emissions were estimated using maximum hours allowed for emergency engines under EPA 40 CFR part 60 and 63 and Evergy's estimations and were found to be immaterial. These items account for less than a fraction of one percent of our overall Scope 1 emissions.

### **(7.5.1) Base year end**

12/31/2021

### **(7.5.2) Base year emissions (metric tons CO2e)**

2307.0

### (7.5.3) Methodological details

Scope 2 (Market Based) is being reported for facilities not served by Evergy. Emissions were calculated using actual kWh purchases (when available) and utility specific CO2 emissions factor derived from supplier emissions and generation data.

### Scope 3 category 6: Business travel

#### (7.5.1) Base year end

12/31/2021

#### (7.5.2) Base year emissions (metric tons CO2e)

434.0

### Scope 3 category 7: Employee commuting

#### (7.5.1) Base year end

12/31/2021

#### (7.5.2) Base year emissions (metric tons CO2e)

7338.0

[Fixed row]

### (7.6) What were your organization's gross global Scope 1 emissions in metric tons CO2e?

#### Reporting year

#### (7.6.1) Gross global Scope 1 emissions (metric tons CO2e)

23429233

### (7.6.3) Methodological details

The Scope 1 emissions reported include CO2e emissions from power generation as well as auxiliary equipment, vehicle fleet, facilities comfort heat, HVAC refrigerant losses, and fugitive emissions from transmission and distribution.

## Past year 1

### (7.6.1) Gross global Scope 1 emissions (metric tons CO2e)

27594888

### (7.6.2) End date

12/31/2022

### (7.6.3) Methodological details

The Scope 1 emissions reported include CO2e emissions from power generation as well as auxiliary equipment, vehicle fleet, facilities comfort heat, HVAC refrigerant losses, and fugitive emissions from transmission and distribution.

[Fixed row]

## (7.7) What were your organization's gross global Scope 2 emissions in metric tons CO2e?

	Gross global Scope 2, location-based emissions (metric tons CO2e)	Gross global Scope 2, market-based emissions (metric tons CO2e) (if applicable)	End date
Reporting year	2926	3409	Date input [must be between [10/01/2015 - 10/01/2023]
Past year 1	2700	3350	12/31/2022

[Fixed row]

## (7.8) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.

## Purchased goods and services

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*As an electric utility, the majority of our emissions are reported within our Scope 1 and Scope 2 emissions. A majority of our expenditures are for fuel to generate electricity and are reported under Category 3 Fuel-and-energy-related activities. Evergy has determined that Scope 3 emissions from purchased goods and services are not considered significant towards our GHG inventory.*

## Capital goods

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*As an electric utility, the majority of our emissions are reported within our Scope 1 and Scope 2 emissions. A majority of our expenditures are for fuel to generate electricity and are reported under Category 3 Fuel-and-energy-related activities. Evergy has determined that Scope 3 emissions from purchased goods and services are not considered significant towards our GHG inventory.*

## Fuel-and-energy-related activities (not included in Scope 1 or 2)

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*As an Electric utility, the majority of our emissions are reported within our Scope 1 emissions. This does not meet Evergy's threshold for emissions that are of material concern to investors.*

## Upstream transportation and distribution

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*As an Electric utility, the majority of our emissions are reported within our Scope 1 emissions. This does not meet Evergy's threshold for emissions that are of material concern to investors.*

## Waste generated in operations

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*As an Electric utility, the majority of our emissions are reported within our Scope 1 emissions. We believe that the best way to deliver environmental value is to minimize our waste footprint by reducing the amount of waste we generate in the first place and then looking for opportunities to reuse and recycle materials so that we minimize the waste that we must send to local landfills. Emissions from landfill waste are estimated to not significantly contribute to our total emissions. This does not meet Evergy's threshold for emissions that are of material concern to investors.*

## Business travel

### (7.8.1) Evaluation status

Select from:

Not relevant, calculated

### (7.8.2) Emissions in reporting year (metric tons CO2e)

2394.47

### (7.8.3) Emissions calculation methodology

Select all that apply

Distance-based method

### (7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

100

### (7.8.5) Please explain

*As an Electric utility, the majority of our emissions are reported within our Scope 1 and Scope 2 emissions. Scope 3 emissions from business travel are not considered significant towards our GHG inventory. Scope 3 emissions reported are from business air travel (provided by Evergy's travel software DEEMs), employee personal vehicle mileage, and rental car mileage (from procurement records). These emissions were calculated using factors from EPA's emission factor hub.*

## Employee commuting

### (7.8.1) Evaluation status

Select from:

Not relevant, calculated

### (7.8.2) Emissions in reporting year (metric tons CO2e)

6264.53

### (7.8.3) Emissions calculation methodology

Select all that apply

Distance-based method

#### (7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

#### (7.8.5) Please explain

*As an electric utility, the majority of our emissions are reported within our Scope 1 and Scope 2 emissions. After calculating employee commuting totals, Evergy determined that Scope 3 emissions from employee commuting are not considered significant towards our GHG inventory.*

### Upstream leased assets

#### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

#### (7.8.5) Please explain

*Evergy has no upstream leased assets.*

### Downstream transportation and distribution

#### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

#### (7.8.5) Please explain

*The emissions associated with line losses due to transportation and distribution have been reported within our Scope 1 emissions, which cover power generation and production and delivery.*

### Processing of sold products

#### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*Our product (electricity) does not require further processing.*

## Use of sold products

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*Emissions related to generation of electricity (the sold product) are included within Scope 1 emissions. Electricity is simply consumed, thus Evergy has determined this category is not relevant.*

## End of life treatment of sold products

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*End of life treatment of sold products is not applicable to our "product." Evergy has determined that since electricity is simply consumed this category is not relevant.*

## Downstream leased assets

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*We have not identified any further downstream leased assets that have not been included with our scope 1 emissions.*

## Franchises

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*Evergy has no franchises.*

## Investments

### (7.8.1) Evaluation status

Select from:

Not relevant, explanation provided

### (7.8.5) Please explain

*Emissions from investment assets that are material have been reported with Scope 1 and Scope 2 emissions.*

## Other (upstream)

### (7.8.1) Evaluation status

Select from:

Not evaluated

## Other (downstream)

### (7.8.1) Evaluation status

Select from:

Not evaluated

[Fixed row]

### (7.8.1) Disclose or restate your Scope 3 emissions data for previous years.

#### Past year 1

##### (7.8.1.1) End date

12/31/2022

*Evergy has been a member of the Rights-of-Way as Habitat Working Group since 2018. This group represents more than 200 organizations across private industry, government agencies, non-profit organizations, and academia in the United States and Canada. Their purpose is to collaborate and identify best management practices for habitat conservation on working landscapes, specifically our power line rights-of-ways. Evergy was also an early supporter of the monarch butterfly Candidate Conservation Agreement with Assurances (CCAA). This CCAA is a formal agreement between the U.S. Fish and Wildlife Service and non-federal property owners, like Evergy, to voluntarily commit to enhance, restore or maintain habitat to benefit the monarch butterfly with the goal that listing this species as endangered or threatened will become unnecessary. By enrolling in this CCAA, Evergy has committed to conserving over 20,000 acres of monarch butterfly habitat on our rights-of-ways and company-owned lands throughout Kansas and Missouri.*

Select from:

Underway

### (7.53.1.82) Explain target coverage and identify any exclusions

*Owned generation Scope 1 carbon dioxide emissions are included in this target*

### (7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

*Evergy's plan for achieving its owned generation Scope 1 target is outlined in its public IRP. The primary relative highlights from the IRP are summarized below: IRP Goals: • Energy solutions that result in the most cost effective and lowest risk option for our customers • Builds on our own strong generation transition track record. Since 2005, we cut our carbon emissions by more than 50 percent. Over that same period, we added more than 4,600 megawatts of renewable generation (including both owned generation resources and renewable energy sourced through long-term power purchase agreements) and retired more than 2,400 megawatts of fossil generation. Evergy is providing roughly half of retail customers' energy needs through emission-free sources. • Reduces carbon emissions by 70% through 2030 (relative to 2005 levels). Building on this trajectory, our goal is to achieve net-zero carbon emissions by 2045, assuming enabling technologies and supportive public policies are in place. Evergy's current Preferred Resource Plan includes the addition of more than 3,000 MW of renewable generation through 2030 and the retirement of more than 4,800 MW of fossil generation over the next 20 years. This will be accomplished by: Continued responsible transition of existing fossil generation from baseload to reliable, flexible back-up capacity, lowering operating costs and carbon emissions. Retirement of nearly all remaining coal generation in the next 20 years, with more than 3,000 MWs of renewables by 2030 as well as approximately 3,400 MW of zero-carbon emitting firm, dispatchable resources added after 2035. Technology advancements will offer the ability to optimize timing and provide the potential to further accelerate Evergy's generation transition. The IRP also addresses the growing reality of increased insurance, financing, and other costs to customers if Evergy doesn't timely complete the transition of its generation portfolio. Progress to date: In 2023, Carbon emissions have been reduced by more than 50% from the 2005 baseline and we continue to aim for steady progress to meet the 70% reduction goal by 2030 and net-zero, assuming enabling technologies and supportive public policies are in place, by 2045.*

#### Low-carbon vehicles

Percentage of low-carbon vehicles in company fleet

### (7.54.2.7) End date of base year

12/31/2019

### (7.54.2.8) Figure or percentage in base year

1

### (7.54.2.9) End date of target

12/31/2030

### (7.54.2.10) Figure or percentage at end of date of target

35

### (7.54.2.11) Figure or percentage in reporting year

15

### (7.54.2.12) % of target achieved relative to base year

41.1764705882

### (7.54.2.13) Target status in reporting year

Select from:

Underway

### (7.54.2.15) Is this target part of an emissions target?

No.

### (7.54.2.16) Is this target part of an overarching initiative?

Select all that apply

No, it's not part of an overarching initiative

### (7.54.2.18) Please explain target coverage and identify any exclusions

*Evergy's goal is that 100% of new light-duty vehicle purchases will be electric by 2030. In addition, Evergy has a goal that a 35% of our overall vehicle fleet including light-duty, medium-duty, heavy-duty, forklifts, and small utility vehicles be electrified by 2030.*

### (7.54.2.20) Plan for achieving target, and progress made to the end of the reporting year

*15% total fleet electrification as of year-end 2023. Electrification supports better utilization of the electric grid, reduces carbon emissions, and helps lower energy costs for all customers. Our electrification strategy includes efforts to implement policies and programs, and the related infrastructure investments, to promote and enable electric vehicle adoption.*

[Add row]

### (7.54.3) Provide details of your net-zero target(s).

#### Row 1

#### (7.54.3.1) Target reference number

Select from:

NZ1

#### (7.54.3.2) Date target was set

12/31/2021

#### (7.54.3.3) Target Coverage

Select from:

- Organization-wide

#### (7.54.3.4) Targets linked to this net zero target

Select all that apply

- Abs1

#### (7.54.3.5) End date of target for achieving net zero

12/31/2045

#### (7.54.3.6) Is this a science-based target?

Select from:

- Yes, we consider this a science-based target, but we have not committed to seek validation of this target by the Science Based Targets initiative within the next two years

#### (7.54.3.8) Scopes

Select all that apply

- Scope 1
- Scope 2

#### (7.54.3.9) Greenhouse gases covered by target

Select all that apply

- Methane (CH<sub>4</sub>)
- Nitrous oxide (N<sub>2</sub>O)
- Carbon dioxide (CO<sub>2</sub>)
- Perfluorocarbons (PFCs)
- Hydrofluorocarbons (HFCs)
- Sulphur hexafluoride (SF<sub>6</sub>)
- Nitrogen trifluoride (NF<sub>3</sub>)

#### (7.54.3.10) Explain target coverage and identify any exclusions

Our long-term target is to achieve net-zero CO2e emissions, for Scope 1 and Scope 2 emissions by 2045, assuming enabling technologies and supportive public policies are in place, through the responsible transition of Evergy's generation fleet.

### (7.54.3.11) Target objective

Our long-term target is to achieve net-zero CO2e emissions, for Scope 1 and Scope 2 emissions, by 2045, assuming enabling technologies and supportive public policies are in place, through the responsible transition of Evergy's generation fleet.

### (7.54.3.12) Do you intend to neutralize any residual emissions with permanent carbon removals at the end of the target?

Select from:

Unsure

### (7.54.3.13) Do you plan to mitigate emissions beyond your value chain?

Select from:

No, and we do not plan to within the next two years

### (7.54.3.17) Target status in reporting year

Select from:

Underway

[Add row]

**(7.55.1) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings.**

	Number of initiatives	Total estimated annual CO2e savings in metric tonnes CO2e (only for rows marked *)
Under investigation	0	Numeric input

	Number of initiatives	Total estimated annual CO2e savings in metric tonnes CO2e (only for rows marked *)
To be implemented	1	2352747
Implementation commenced	0	0
Implemented	2	7041230
Not to be implemented	0	<i>Numeric input</i>

*[Fixed row]*

**(7.55.2) Provide details on the initiatives implemented in the reporting year in the table below.**

### Row 1

#### (7.55.2.1) Initiative category & Initiative type

##### Energy efficiency in production processes

Other, please specify :Evergy Energy Efficiency Programs

#### (7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

113396

#### (7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

*Select all that apply*

Scope 1

#### (7.55.2.4) Voluntary/Mandatory

Select from:

Mandatory

## Row 2

### (7.55.2.1) Initiative category & Initiative type

Low-carbon energy generation

Other, please specify :Carbon-Free Generation: Wind; Solar, Hydro

### (7.55.2.2) Estimated annual CO2e savings (metric tonnes CO2e)

9280581

### (7.55.2.3) Scope(s) or Scope 3 category(ies) where emissions savings occur

Select all that apply

Scope 1

### (7.55.2.4) Voluntary/Mandatory

Select from:

Voluntary

[Add row]

## (7.55.3) What methods do you use to drive investment in emissions reduction activities?

### Row 1

#### (7.55.3.1) Method

Select from:

Dedicated budget for energy efficiency

### (7.55.3.2) Comment

*Evergy has been investing in DSM programs – specifically, energy efficiency and demand response – for more than ten years. In Missouri, Evergy offers a portfolio of programs to provide customers (residential and business) with opportunities to invest in energy efficiency to drive long-term energy savings with a faster payback on the investment. Evergy also incentivizes customers to help Evergy manage our peak system demand with business demand response programs and residential thermostat incentives. Evergy received an extension of our MEEIA Cycle 3 programs for an additional year, which extends the programs through the end of 2024. This extension includes increased low-income program budgets and year-round demand response programs. In Kansas, Evergy Kansas Central and Evergy Kansas Metro requested Kansas Corporation Commission (KCC) authorization in December 2021 for a suite of energy efficiency programs for customers under the Kansas Energy Efficiency Investment Act (KEEIA). The KCC approved the settlement agreement pertaining to Evergy Kansas Central's and Evergy Metro's KEEIA request on September 1, 2023. Evergy Kansas Central's and Evergy Metro's proposed programs were approved in early 2024 and are set to expire in 2027. Evergy provides residential customers the opportunity to download their energy information in the Green Button format. The Green Button initiative is an industry-led effort that responds to a 2012 White House call-to-action to provide utility customers with easy and secure access to their energy usage information in a consumer-friendly and computer-friendly format for electricity, natural gas, and water usage.*

### Row 3

### (7.55.3.1) Method

Select from:

Compliance with regulatory requirements/standards

### (7.55.3.2) Comment

*The long-established Missouri Renewable Energy Standard and Kansas Renewable Energy Standard initially provided incentive for Evergy to undertake renewable energy additions. That, coupled with an aging fossil fleet and favorable renewable energy economics, resulted in Evergy adding renewable facilities which allowed it to comply with this standard. As of year-end 2022, this included total renewable capacity and total renewable net generation. Evergy completes an IRP every three years which are subject to state regulatory commission-approved rules in both Kansas and Missouri and which include robust scenario analysis. These analyses define Evergy's resource plan for the next 20 years. In addition to full triennial filings, Evergy also completes annual updates to these filings every year to incorporate changes in market conditions, among other factors. Climate scenarios are incorporated into this analysis using critical uncertain factors which are combined to create a variety of quantitative, economic scenarios for analysis. In Evergy's most recent IRP, 27 different scenarios were evaluated which included variations in load growth, natural gas prices, and CO2 restrictions. This process has been described in-depth in Evergy's Task Force on Climate-Related Financial Disclosures (TCFD) report. CO2 prices represent the most directly climate-related input into the IRP scenario analysis and, while specific assumptions are proprietary and confidential, this analysis includes a very large range of potential values for CO2. Ultimately, this scenario analysis informs the selection of Evergy's preferred resource plan – including plant retirements and additions.*

[Add row]

## (7.74.1) Provide details of your products and/or services that you classify as low-carbon products.

### Row 1

#### (7.74.1.1) Level of aggregation

Select from:

Product or service

#### (7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

Low-Carbon Investment (LCI) Registry Taxonomy

#### (7.74.1.3) Type of product(s) or service(s)

Power

Other, please specify :Wind Power

#### (7.74.1.4) Description of product(s) or service(s)

*Evergy's green tariff program, Renewables Direct, offers large commercial and industrial customers a turn-key solution to obtain wind energy. The Global Investor Coalition on Climate Change Low Carbon Investment (LCI) Registry Taxonomy clearly identifies both Wind and Solar Energy investments as included categories.*

#### (7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

Yes

#### (7.74.1.6) Methodology used to calculate avoided emissions

Select from:

Other, please specify :Evergy has performed an internal evaluation that indicates a CO2 reduction of 2,000 pounds for every renewable MWh generated. This value is in line with the 2022 AVoid Emissions and geneRation Tool (AVERT) emissions factors provided by the USEPA.

### (7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

Use stage

### (7.74.1.8) Functional unit used

CO2 Metric Tons

### (7.74.1.9) Reference product/service or baseline scenario used

*Eergy has performed an internal evaluation that shows that coal production has been directly offset by renewable additions. Results indicate that coal generation, on average, produces 2,000 pounds of CO2 for every MWh generated. Renewable generation on the other hand produces zero pounds of CO2 for every MWh generated.*

### (7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

Use stage

### (7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

*Eergy has performed an internal evaluation that shows that coal production has been directly offset by renewable additions. Results indicate that this provides a CO2 reduction of 2,000 pounds for every renewable MWh generated. This value aligns with the 2022 AVERT emissions factors provided by the USEPA. Revenues associated with this program are not publicly disclosed.*

## Row 3

### (7.74.1.1) Level of aggregation

Select from:

Product or service

### (7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

Low-Carbon Investment (LCI) Registry Taxonomy

### (7.74.1.3) Type of product(s) or service(s)

#### Power

Other, please specify :Wind Power

### (7.74.1.4) Description of product(s) or service(s)

*Evergy's subscription-based wind program provides customers with a wind-powered renewable energy solution. This program allows customers to offset up to 100 percent of their electric usage from local renewable energy resources. The Global Investor Coalition on Climate Change Low Carbon Investment (LCI) Registry Taxonomy clearly identifies both Wind and Solar Energy investments as included categories.*

### (7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

Yes

### (7.74.1.6) Methodology used to calculate avoided emissions

Select from:

Other, please specify :Evergy has performed an internal evaluation that indicates a CO2 reduction of 2,000 pounds for every renewable MWh generated. This value is in line with the 2022 AVoid Emissions and geneRation Tool (AVERT) emissions factors provided by the USEPA.

### (7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

Use stage

### (7.74.1.8) Functional unit used

CO2 Metric Tons

### (7.74.1.9) Reference product/service or baseline scenario used

Evergy has performed an internal evaluation that shows that coal production has been directly offset by renewable additions. Results indicate that coal generation, on average, produces 2,000 pounds of CO2 for every MWh generated. Renewable generation on the other hand produces zero pounds of CO2 for every MWh generated.

#### (7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

Use stage

#### (7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

Evergy has performed an internal evaluation that shows that coal production has been directly offset by renewable additions. Results indicate that this provides a CO2 reduction of 2,000 pounds for every renewable MWh generated. This value aligns with the 2022 AVERT emissions factors provided by the USEPA. Revenues associated with this program are not publicly disclosed.

### Row 4

#### (7.74.1.1) Level of aggregation

Select from:

Product or service

#### (7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

Low-Carbon Investment (LCI) Registry Taxonomy

#### (7.74.1.3) Type of product(s) or service(s)

**Power**

Other, please specify :Solar PV

#### (7.74.1.4) Description of product(s) or service(s)

*Evergy's Solar Subscription programs provide standard and income-eligible customers with renewable energy solutions through a local community-based initiative without the hassle of installing and maintaining solar. Evergy offers Solar Subscription in Missouri and Kansas. The Global Investor Coalition on Climate Change Low Carbon Investment (LCI) Registry Taxonomy clearly identifies both Wind and Solar Energy investments as included categories.*

#### **(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)**

Select from:

Yes

#### **(7.74.1.6) Methodology used to calculate avoided emissions**

Select from:

Other, please specify :Evergy has performed an internal evaluation that indicates a CO2 reduction of 2,000 pounds for every renewable MWh generated. This value is in line with the 2022 AVoid Emissions and geneRation Tool (AVERT) emissions factors provided by the USEPA.

#### **(7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)**

Select from:

Use stage

#### **(7.74.1.8) Functional unit used**

CO2 Metric Tons

#### **(7.74.1.9) Reference product/service or baseline scenario used**

*Evergy has performed an internal evaluation that shows that coal production has been directly offset by renewable additions. Results indicate that coal generation, on average, produces 2,000 pounds of CO2 for every MWh generated. Renewable generation on the other hand produces zero pounds of CO2 for every MWh generated.*

#### **(7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario**

Select from:

Use stage

#### **(7.74.1.12) Explain your calculation of avoided emissions, including any assumptions**

*Evergy has performed an internal evaluation that shows that coal production has been directly offset by renewable additions. Results indicate that this provides a CO2 reduction of 2,000 pounds for every renewable MWh generated. This value aligns with the 2022 AVERT emissions factors provided by the USEPA. Revenues associated with this program are not publicly disclosed.*

*[Add row]*

## C9. Environmental performance - Water security

### (9.1.1) Provide details on these exclusions.

#### Row 1

##### (9.1.1.1) Exclusion

Select from:

Facilities

##### (9.1.1.2) Description of exclusion

*Evergy owns over 910 properties and less than 30 are related to the direct generation of power. The non-generation facilities include offices, substations, warehouses and maintenance buildings. These facilities account for less than 1 percent of Evergy's 2023 total water use. The scope of this disclosure includes 11 coal fired generation units and 30 combustion turbine (CT) units. The coal and CT units are spread across 13 site locations. Of the thirteen sites (facilities) included in the survey, 6 are CT facilities, 6 steam turbine, and 1 nuclear. Solar, wind, combustion turbine facilities that do not utilize water for power generation are excluded from the water survey. Evergy owns and operates 5 wind sites that do not utilize water for power generation. In addition, 5 of the 11 natural gas combustion turbine sites, owned by Evergy, do not utilize water for the power generation process. Therefore, these 5 sites are excluded from the water survey. The scope of this survey is specific to sites that Evergy has both ownership and operational control. Evergy has partial ownership of Stateline, a combined cycle facility in Missouri, and a contractual agreement with Crossroads Energy Center, a combustion turbine facility in Mississippi. Other entities not affiliated with Evergy operate both of these partially owned facilities and Evergy employees do not conduct the day-to-day operations; as a result, they are excluded from this response.*

##### (9.1.1.3) Reason for exclusion

Select from:

Data is not available

##### (9.1.1.4) Primary reason why data is not available

Select from:

Judged to be unimportant or not relevant

##### (9.1.1.7) Percentage of water volume the exclusion represents

Select from:

Less than 1%

### (9.1.1.8) Please explain

*Evergy owns over 910 properties and less than 30 are related to the direct generation of power. The non-generation facilities include offices, substations, warehouses and maintenance buildings. These facilities account for less than 1 percent of Evergy's 2023 total water use. The scope of this disclosure includes 11 coal fired generation units and 30 combustion turbine (CT) units. The coal and CT units are spread across 13 site locations. Of the thirteen sites (facilities) included in the survey, 6 are CT facilities, 6 steam turbine, and 1 nuclear. Solar, wind, combustion turbine facilities that do not utilize water for power generation are excluded from the water survey. Evergy owns and operates 5 wind sites that do not utilize water for power generation. In addition, 5 of the 11 natural gas combustion turbine sites, owned by Evergy, do not utilize water for the power generation process. Therefore, these 5 sites are excluded from the water survey. The scope of this survey is specific to sites that Evergy has both ownership and operational control. Evergy has partial ownership of Stateline, a combined cycle facility in Missouri, and a contractual agreement with Crossroads Energy Center, a combustion turbine facility in Mississippi. Other entities not affiliated with Evergy operate both of these partially owned facilities and Evergy employees do not conduct the day-to-day operations; as a result, they are excluded from this response.*

[Add row]

## (9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

### Water withdrawals – total volumes

#### (9.2.1) % of sites/facilities/operations

Select from:

100%

#### (9.2.2) Frequency of measurement

Select from:

Monthly

#### (9.2.3) Method of measurement

*Kansas (KS) Department of Agriculture (KDA) Division of Water Resources (DWR) regulates water withdrawals. Withdrawals in KS from ground and surface water, and large volumes of stormwater runoff are permitted with volume and rate limitations. KDA DWR has metering requirements for ground and surface water pumping.*

*Evergy's meters are state approved and inspected. For Missouri facilities, water withdrawal volumes are based on metering, pump hours, flow rate, or engineering methods*

#### **(9.2.4) Please explain**

*Our methodology and scope are consistent with our reporting obligations for the Kansas Department of Agriculture (KDA) Division of Water Resources (DWR), which regulates water withdrawal volumes in the state of Kansas. This means that withdrawals in Kansas from groundwater, surface water, and significant volumes of stormwater runoff are permitted with volume and flow rate limitations. KDA DWR also has metering requirements for groundwater and surface water pumping. Evergy's meters are state-approved and determine our withdrawal volumes. For Missouri facilities, water withdrawal volumes are based on metering, pump hours and flow rate, or engineering methods. Both Kansas and Missouri require annual reporting of water withdrawal for facilities considered to be major water users*

### **Water withdrawals – volumes by source**

#### **(9.2.1) % of sites/facilities/operations**

Select from:

100%

#### **(9.2.2) Frequency of measurement**

Select from:

Monthly

#### **(9.2.3) Method of measurement**

*Surface and groundwater sources are metered or calculated based on pump information. Stormwater runoff is based on watershed area precipitation, with an appropriate runoff coefficient. For combustion turbine (CT) sites, we source water from groundwater or a local municipality. It is metered for the CT sites, and we use local municipality meter readings (received through invoices) to determine monthly volume use for all sites that use municipality water for electric generation.*

#### **(9.2.4) Please explain**

*Water withdrawals of our coal and nuclear facilities come from surface water, groundwater, local municipalities, and stormwater runoff into company-owned lakes. The methods for calculating the water withdrawal from each source meets the reporting requirements in both Kansas and Missouri that requires monthly breakdowns of water withdrawal data.*

### **Water withdrawals quality**

### (9.2.1) % of sites/facilities/operations

Select from:

26-50

### (9.2.2) Frequency of measurement

Select from:

Other, please specify :Monthly for two facilities and as needed for operations and permit renewals at other large generation facilities.

### (9.2.3) Method of measurement

*Four facilities are CT units that use municipal water for process water, resulting in access to water quality information via consumer reports published under the Clean Water Act. Two facilities utilize cooling lakes as their cooling water system. Their NPDES permits require monitoring water quality at the intake from the lake, including flow, total suspended solids, temperature, pH, minerals and metals, etc. All six facilities are monitored and/or have access to water quality information.*

### (9.2.4) Please explain

*Sites that utilize municipal water receive water quality information annually. Other generation sites periodically collect incoming water quality information for projects or operations. Data collection may occur if there is an elevated pollutant in a discharge stream, for evaluating water treatment processes, or for permit renewals.*

## Water discharges – total volumes

### (9.2.1) % of sites/facilities/operations

Select from:

100%

### (9.2.2) Frequency of measurement

Select from:

Other, please specify :Depending on the discharge frequency and volume of water, the requirement of monitoring flow is variable ranging from daily, weekly, monthly, or quarterly.

### (9.2.3) Method of measurement

Methods include pump run times and flow rates, weir heights, and online flow monitoring. The other four facilities are combustion turbine (CT) sites that utilize an insignificant amount of water compared to the coal-fired and nuclear facilities and did not discharge water during 2023.

#### (9.2.4) Please explain

All generation facilities that discharge wastewater into the environment are monitored as required for the NPDES program through both the state of Kansas and Missouri. Of the facilities in scope, nine discharge and the volume of the discharge is measured and/or calculated by methods appropriate and approved under the state issued NPDES permit. Hutchinson, Ralph Green, Greenwood, and South Harper do not discharge water offsite.

### Water discharges – volumes by destination

#### (9.2.1) % of sites/facilities/operations

Select from:

100%

#### (9.2.2) Frequency of measurement

Select from:

Other, please specify :Water discharge volumes are collected based on frequency requirements in the site specific NPDES permits, which range from daily to quarterly.

#### (9.2.3) Method of measurement

All Every generation facilities that discharge wastewater back into the environment are permitted to do so under the CWA. Through the permitting process and to meet permit requirements, the receiving stream of the discharges is considered to apply appropriate effluent limitations. All discharges are released back to surface water and require periodic monitoring through the NPDES program.

#### (9.2.4) Please explain

The only other routes that wastewater leaves our generation facilities are through evaporation and seepage.

### Water discharges – volumes by treatment method

#### (9.2.1) % of sites/facilities/operations

Select from:

100%

### (9.2.2) Frequency of measurement

Select from:

Other, please specify :All thirteen energy centers under the scope of this disclosure that discharge water do so under the NPDES program. Site specific NPDES permits require variable flow monitoring such as daily, weekly, and monthly.

### (9.2.3) Method of measurement

*The permitting process requires disclosure of treatment methods for the particular wastewater streams that flow into the outfall.*

### (9.2.4) Please explain

*Four energy centers did not discharge water during 2023. These sites include Greenwood, Hutchinson, Ralph Green, and South Harper. The facilities that discharged during 2023 include one nuclear facility, two combustion turbine sites, and six thermal generation sites. All these facilities have varying levels of wastewater treatment systems in place to meet effluent limitations as required by their specific NPDES permit.*

## Water discharge quality – by standard effluent parameters

### (9.2.1) % of sites/facilities/operations

Select from:

100%

### (9.2.2) Frequency of measurement

Select from:

Other, please specify :Monitoring frequency is also variable based on outfall from daily up to quarterly monitoring and sampling.

### (9.2.3) Method of measurement

*For the nine Evergy facilities that discharged water in 2023, discharges were monitored, as required, by their site-specific NPDES permit. Each outfall that discharges facility water has set parameters and monitoring frequency that is determined by state regulatory agencies through the NPDES permit renewal process. Outfall*

parameters vary based on permit requirements. Example parameters include total suspended solids, metals-such as copper and iron, nutrients-such as phosphorus and nitrogen.

#### (9.2.4) Please explain

Visual inspections can also be required to look for foaming, oil sheen, and discoloration of water. The data associated with the effluent monitoring is submitted to respective state agencies for review. Discharges did not occur at Hutchinson, Greenwood, Ralph Green, and South Harper during 2023.

### Water discharge quality – emissions to water (nitrates, phosphates, pesticides, and/or other priority substances)

#### (9.2.1) % of sites/facilities/operations

Select from:

100%

#### (9.2.2) Frequency of measurement

Select from:

Other, please specify :Monitoring frequency is also variable based on outfall from daily up to quarterly monitoring and sampling.

#### (9.2.3) Method of measurement

For the nine Evergy facilities that discharged water in 2023, discharges were monitored, as required, by their site-specific NPDES permit. Each outfall that discharges facility water has set parameters and monitoring frequency that is determined by state regulatory agencies through the NPDES permit renewal process. Outfall parameters vary based on permit requirements. Example parameters include total suspended solids, metals-such as copper and iron, nutrients-such as phosphorus and nitrogen.

#### (9.2.4) Please explain

Visual inspections can also be required to look for foaming, oil sheen, and discoloration of water. The data associated with the effluent monitoring is submitted to respective state agencies for review. Discharges did not occur at Hutchinson, Greenwood, Ralph Green, and South Harper during 2023.

### Water discharge quality – temperature

#### (9.2.1) % of sites/facilities/operations

Select from:

100%

### (9.2.2) Frequency of measurement

Select from:

Other, please specify :For once-through cooling outfalls, temperature data is required to be collected daily. For other outfalls, temperature is collected less frequently.

### (9.2.3) Method of measurement

*Of facilities that discharged in 2023, all of them had at least one discharging outfall where temperature data was collected.*

### (9.2.4) Please explain

*Of final outfalls located at the facilities that discharged in 2023, 22% of the outfalls are monitored for temperature. The other streams have not been determined to cause temperature rise; therefore, are not currently identified as needing to be monitored. Some discharging facilities have not been determined to cause a temperature rise and are not required to monitor for temperature under the NPDES permit. However, each of these facilities monitors specific outfalls for temperature.*

## Water consumption – total volume

### (9.2.1) % of sites/facilities/operations

Select from:

100%

### (9.2.2) Frequency of measurement

Select from:

Monthly

### (9.2.3) Method of measurement

*Consumption is calculated on a site-specific basis as each facility utilizes different water sources such as rivers, lakes, and groundwater. Water returns are measured through the NPDES program administered onsite. For combustion turbine facilities that use considerably less water, water use is considered to encompass all consumption since they recycle it through reuse or irrigation.*

## (9.2.4) Please explain

*For the thirteen facilities listed in this disclosure, both incoming and discharging water tracking occurs. The information is presented based on volume consumed but also the rate of water consumed per megawatt hour of electricity supplied.*

## Water recycled/reused

### (9.2.1) % of sites/facilities/operations

Select from:

26-50

### (9.2.2) Frequency of measurement

Select from:

Monthly

### (9.2.3) Method of measurement

*Data is calculated and allows the flows per month to be tracked. LaCygne and Wolf Creek: all outfalls, which discharge to the company owned lakes for reuse, are tracked under NPDES. Lawrence: The recycled water is tracked from the supply pit back to the air quality control system. Hawthorn: Processes are calculated and tracked using run times of the systems. Iatan: currently tracks ions throughout the system, which also includes flows.*

## (9.2.4) Please explain

*In 2023, water recycling/reuse occurred in 46% of facilities noted in this disclosure*

## The provision of fully-functioning, safely managed WASH services to all workers

### (9.2.1) % of sites/facilities/operations

Select from:

100%

### (9.2.2) Frequency of measurement

Select from:

Continuously

### (9.2.3) Method of measurement

*Evergy relies on regulated municipalities to provide potable water to our facilities rather than treating water inhouse as we recognize the importance of this resource. With Evergy relying on regulated municipalities to provide potable water, the method for measurement is documenting the expectation that all employees have access to this resource.*

### (9.2.4) Please explain

*All Evergy's facilities have safe and clean water available for Evergy personnel and visitors. The evaluation of providing safe and clean water is completed as new facilities are established (frequency) by Evergy.*

*[Fixed row]*

**(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?**

**Total withdrawals**

### (9.2.2.1) Volume (megaliters/year)

1018545

### (9.2.2.2) Comparison with previous reporting year

Select from:

About the same

### (9.2.2.3) Primary reason for comparison with previous reporting year

Select from:

Other, please specify :Similar operations to previous year

#### (9.2.2.4) Five-year forecast

Select from:

Lower

#### (9.2.2.5) Primary reason for forecast

Select from:

Other, please specify :Investment in renewable generation, such as solar and wind, water withdrawals and discharges will decrease due to these sources of generation not relying on water.

#### (9.2.2.6) Please explain

*The figure reported in the volume section includes all Evergy's power generation facilities that utilize process water. Water withdrawals include surface, significant impounded stormwater, groundwater, as well as any municipal water utilized for electric generation process. Of the water withdrawn, approximately 89% was utilized for once-through cooling processes. 96.9% of the water withdrawn was for supporting coal-fired generation facilities. Future Outlook: As renewable generation increases, such as solar and wind, water withdrawals and discharges will decrease due to these sources of generation not relying on water. Dependence on water is expected to decrease as we work toward responsibility transitioning our generation fleet.*

### Total discharges

#### (9.2.2.1) Volume (megaliters/year)

#### (9.2.2.5) Primary reason for forecast

Select from:

Other, please specify :Investment in renewable generation, such as solar and wind, water withdrawals and discharges will decrease due to these sources of generation not relying on water.

#### (9.2.2.6) Please explain

*The figure reported in the volume column includes all power generation facilities that discharged process wastewater during 2023. Although the scope of the survey includes thirteen generating facilities, five of the facilities did not discharge water during 2023. The facilities that did discharge included: Six steam generating facilities accounted for the majority of the water discharges at 99.99% of Evergy's total discharge. Of the six facilities, three utilize once-through cooling which accounts for a significant portion of the total discharges. Once-through discharges were 99.32% of Evergy's total water discharges. Two combustion turbine sites utilized a small portion of total water for evaporative cooling, their portion of discharge is insignificant at 0.016% of Evergy's total discharges during 202. Evaporative coolers for CTs typically are only needed during warm months and do not operate year-round. Future Outlook: As renewable generation increases, such as solar and wind, water withdrawals and discharges will decrease due to these sources of generation not relying on water. Dependence on water is expected to decrease as we work toward our climate goals that include retirements within our fossil fuel fired generation fleet.*

### Total consumption

Select from:

Lower

#### (9.2.2.5) Primary reason for forecast

Select from:

Other, please specify :Investment in renewable generation, such as solar and wind, water withdrawals and discharges will decrease due to these sources of generation not relying on water.

#### (9.2.2.6) Please explain

*Water consumption accounts for approximately 5.5% of the total water that is withdrawn for Evergy's generating facilities. For this survey, Evergy used this definition for water consumption: "Amount of freshwater consumed for use in thermal generation. "Freshwater" includes water sourced from fresh surface water, groundwater, rainwater, and fresh municipal water and does not include recycled, reclaimed, or gray water. Water consumption is defined as water that is not returned to the original water source after being withdrawn, including evaporation to the atmosphere." To achieve water tracking based on the above definition of water consumption, site specific water equations were developed for each energy center. Each site's configuration, data availability, and water compliance tracking obligations were considered to develop the most representative equation for tracking water consumption. The need for site specific equations was due to not all discharge streams being continuously monitored. Therefore, using one data point a month to calculate an estimated daily discharge may cause over or under estimation. For sites that use cooling lakes, a cooling lake evaporative model is used to calculate forced evaporation caused from the operation of the facility. Evergy's Kansas facilities utilizing surface water, groundwater, and impounded stormwater must have water rights. The discharges, that account for pass-through stormwater, at LaCygne, Jeffrey and Wolf Creek facilities, that have company-owned lakes, all have water rights to impound stormwater; and stormwater associated with these facilities are calculated and considered a 'withdrawal'. For all other Kansas facilities that have stormwater runoff and discharge the stormwater, this water is not considered a 'withdrawal' since Evergy does not have the right to impound and beneficially reuse the water.*

*[Fixed row]*

**(9.2.4) Indicate whether water is withdrawn from areas with water stress, provide the volume, how it compares with the previous reporting year, and how it is forecasted to change.**

### (9.2.4.1) Withdrawals are from areas with water stress

Select from:

No

### (9.2.4.8) Identification tool

Select all that apply

WRI Aqueduct

### (9.2.4.9) Please explain

*Evergy conducted a WRA that utilized climate change tools and databases such as WRI and Water Risk Atlas, the U.S. Army Corps of Engineers' Climate Hydrology Assessment Tool, the National Oceanic and Atmospheric Administration's Climate Explorer Tool, and the U.S. Drought Monitor. The assessment reviewed the generation facilities that relied upon freshwater resources rather than a municipality. For this specific question, the WRI Aqueduct was utilized to understand the current and future (2030 and 2040) water availability for each site. The tool was applied to the watersheds where Evergy's power generation sites are located. The tool was also applied to the Powder River Basin in Wyoming, where Evergy sources the coal for power generation. Both baseline and future scenario analyses were applied to the water basins where Evergy has generation operations. The data was reviewed for both the Representative Concentration Pathway (RCP)4.5 and 8.5 emission scenarios. These RCPs were chosen to align with a scenario limiting global warming to 2C (3.6F) (RCP4.5) and a scenario where there are increased physical risks due to extremely high emissions (RCP8.5). Using these scenarios is also considered best practice, as it can show the worst case (more conservative) approach as well as a lower emissions scenario. The optimistic scenario is considered "stable economic development and carbon emissions peaking and declining by 2040." The optimistic scenario is in alignment with a RCP4.5 climate scenario. The business-as-usual scenario is in alignment with a RCP8.5. A mid-century timeframe was chosen to align with the design life of existing energy infrastructure. WRI defines baseline water stress to be "defined as the ratio of total water withdrawals to available renewable surface and groundwater supplies. Water withdrawals include domestic, industrial, irrigation, and livestock consumptive and no consumptive use. Available renewable water supplies include the impact of upstream consumptive water users and large dams on downstream water availability." Higher values of this ratio indicate water stress as there is more competition among water users. Low water stress is measured with a ratio of less than 10%, and high is measured with a ratio of 40% or higher. The results from the use of the WRI for Evergy's WRA indicated that no generation facilities are currently located in areas of high or extremely high-water risk. The overall water risk, which is a combination of physical risk quantity, physical risk quality, and regulatory and reputational risk is low and low to medium for all sites. The analysis with the WRI tool projected water risk in 2030 and 2040 due to the potential impact of droughts.*

[Fixed row]

### (9.2.7) Provide total water withdrawal data by source.

**Fresh surface water, including rainwater, water from wetlands, rivers, and lakes**

#### (9.2.7.1) Relevance

Select from:

Relevant

### (9.2.7.2) Volume (megaliters/year)

1002739

### (9.2.7.3) Comparison with previous reporting year

Select from:

About the same

### (9.2.7.4) Primary reason for comparison with previous reporting year

Select from:

Other, please specify :Similar operations to previous year.

### (9.2.7.5) Please explain

*Fresh surface water withdrawals account for 98.4% of water withdrawals for the generation facilities. The Missouri (MO) River, Kansas (KS) River and company owned lakes are the main water bodies that are relied upon. Water withdrawn from the KS River is metered with a state approved meter to comply with state regulations. Water withdrawn from the MO River is metered at the discharge of the stream since no losses occur in the facility as it is only for cooling purposes. To calculate the rainwater that Evergy impounds at Jeffrey, LaCygne, and Wolf Creek facilities, precipitation and the surface area of the watershed is used. At LaCygne and Wolf Creek, the Soil Conservation Service runoff curve method estimates runoff into the lake. Future Outlook: The amount of fresh surface water withdrawn will depend on precipitation and runoff into Evergy's lakes. For facilities that do not impound stormwater, fresh water withdrawn is expected to remain the same.*

## Brackish surface water/Seawater

### (9.2.7.1) Relevance

Select from:

Not relevant

### (9.2.7.5) Please explain

*"Not relevant" was chosen because Evergy's operations are not located near, nor withdraw water from, brackish or seawater sources.*

## Groundwater – renewable

### (9.2.7.4) Primary reason for comparison with previous reporting year

Select from:

Other, please specify :Similar operations to previous year.

### (9.2.7.5) Please explain

*Groundwater wells exist for utilization at Evergy's Jeffrey, Iatan, Gordon Evans and Lake Road facilities. The location of the groundwater wells for Iatan and Lake Road is close to the Missouri River while the Jeffrey wells are close to the Kansas River. Gordon Evans, which utilized 113 megaliters during 2023 is the only generating facility that utilized groundwater that was not near a large surface body of water that interacts with the water supply. Future Outlook: The amount of groundwater withdrawn should stay relatively the same or slightly increase in future years. This is due to Jeffrey's wells coming back online for use. The increased use of the groundwater wells at Jeffrey, which are located next to the Kansas River, will support decreased surface water withdrawals for the facility.*

## Groundwater – non-renewable

### (9.2.7.1) Relevance

Select from:

Not relevant

### (9.2.7.5) Please explain

*"Not Relevant" was chosen because Evergy's operations do not withdraw from nonrenewable groundwater sources.*

Other, please specify :Similar operations to previous year

#### (9.2.9.5) % of your sites/facilities/operations this volume applies to

Select from:

11-20

#### (9.2.9.6) Please explain

*Tertiary wastewater treatment occurs for the Flue-Gas Desulfurization (FGD) wastewater at Jeffrey. This applies to 11-20% of the facilities since only eight facilities discharged during 202. The FGD water goes through a physical, chemical, and biological treatment process before being recycled back into the cooling tower water. The constructed wetland system at Jeffrey was specially designed for treatment of the FGD wastewater to treat for metals and nutrients. This approach has historically been successful in treatment of wastewater to comply with the permit effluent limitations under the NPDES program. However, to meet future compliance under NPDES, this wastewater stream will be recycled and ultimately be zero-liquid discharge so this level of treatment will cease after the new zero liquid discharge system is online by the end of 2025.*

### Secondary treatment

#### (9.2.9.1) Relevance of treatment level to discharge

### (9.2.9.5) % of your sites/facilities/operations this volume applies to

Select from:

71-80

### (9.2.9.6) Please explain

*Primary treatment occurs at many Evergy sites through onsite pond systems. Of the eight facilities that discharged during 2023, seven of them utilized primary treatment prior to discharging. Facilities that utilize coal have onsite coal pile runoff ponds to capture and allow sedimentation of any stormwater that hits the coal pile. In addition, many of the sites with a landfill have stormwater and/or a leachate pond associated with that system to allow for sedimentation of solids. Prior to release of water in these ponds, Evergy personnel test the pH, and they perform neutralization treatment as needed. All water discharged from point sources is done under site specific NPDES permits. Therefore, Evergy monitors the wastewater and will adjust treatment as needed to maintain compliance with state and federal regulations. Prior to stormwater and plant wash water entering onsite ponds for sedimentation, most stormwater runoff is routed through onsite oil/water separators to further assist in treatment.*

## Discharge to the natural environment without treatment

### (9.2.9.1) Relevance of treatment level to discharge

Select from:

*Lawrence withdraws water from the Kansas River and from municipal sources. Water withdrawn from the Kansas River is metered as required by DWR. Municipal water is also metered and Evergy utilizes monthly bills to determine overall usage. The discharges from the facility, permitted under the NPDES program, go directly back into the Kansas River. For Lawrence, water consumption is calculated by subtracting the discharges from the withdrawals as this methodology is in alignment with the facility's operational design.*

### (9.3.1.29) Please explain

*Gordon Evans water withdrawal from groundwater wells is metered, as required by the Kansas Department of Agriculture, Division of Water Resources (DWR). The meters are from a state-approved list and are maintained in alignment with the DWR requirements. Water discharge at the facility is measured and documented once per month, in accordance with the site-specific National Pollutant Discharge Elimination System (NPDES) permit. Monthly discharge measurement is not a completely accurate representation of daily discharges. In addition, the discharge includes stormwater that is not owned by Evergy per DWR. Therefore, withdrawal minus discharges does not provide an accurate representation of water consumption. Therefore, Evergy has installed timing meters on the evaporative coolers and a water meter on the reverse osmosis (RO) feed to the units to enhance accuracy in measurement and overall water accounting. The timing meters track the duration that the evaporative coolers were used for each unit and this data can be multiplied by the design evaporative rate to calculate water consumed. The RO unit water is 100% consumed and added to the facility's total water consumption volume. This consumption methodology is more representative of the water utilized and not discharged to the environment for readily available use.*

**(9.3.1.29) Please explain**

*Jeffrey water withdrawals occur through the intake on the Kansas River and through stormwater runoff accumulated in Evergy owned lakes. Jeffrey also has groundwater wells that are used to withdraw water. Water withdrawals from the Kansas River and groundwater wells are metered in accordance with DWR*

requirements. These sources feed Jeffrey's two raw water lakes which provide water to the facility. The discharges, permitted under the NPDES program, occur through two main outfalls, one going directly to the Kansas River and the other discharge from a lake that discharges to a creek, ultimately leading to the Kansas River. Water consumption at Jeffrey is calculated by summing inputs to the facility including, raw water lake pumps and stormwater runoff. Discharges are subtracted from the inputs. Consumption is calculated from the lake pumps because water withdrawals from the Kansas River and groundwater are sent directly to these lakes and the public has access to the lakes. Therefore, Evergy does not account for water removal until the water leaves the lakes for use at the generation facility.

## Water discharges – quality by standard water quality parameters

### (9.3.2.1) % verified

Select from:

76-100

### (9.3.2.2) Verification standard used

*The Environmental Protection Agency (EPA) has approved analytical methods for water quality parameters. All water discharges that are sampled under the NPDES program align with these EPA approved methods that can be found under 40 CFR Chapter 1 Subpart D Part 136. To demonstrate alignment with these standards, the Missouri facilities and the third-party lab participate annually in a Discharge Monitoring Reporting Quality Assurance (DMRQA) study program that is administered by the EPA. The DMRQA is a verification process where labs are supplied samples to test and report back the results to an administrator to determine if the lab is accurately performing the test methods.*

## Water consumption – total volume

#### (9.7.1.1) Water intensity value (m3/denominator)

1141

#### (9.7.1.2) Numerator: water aspect

Select from:

Total water consumption

#### (9.7.1.3) Denominator

Select from:

MWh

#### (9.7.1.4) Comparison with previous reporting year

Select from:

About the same

#### (9.7.1.5) Please explain

*Internally, Evergy tracks gallons per megawatt hour (MWh) by individual generation facility for monthly reviews. The monthly review of this information is disseminated to Environmental and Generation management. This information is used to track water conservation management and inform facilities on their water use. An individual plant review of this information is more beneficial and actionable to both Environmental and Generation management as this level of detail is needed to address any potential water issues and conservation opportunities. For this CDP metric, net generation is Evergy's entire fleet including generation that does not rely on water such as wind and solar. However, this metric is in alignment with what Evergy does internally. Evergy will continue to look at consumption fleet wide versus just on an individual facility basis. Future Outlook: As renewable generation increases, such as solar and wind, water withdrawals and discharges will decrease due to these sources of generation not relying on water. Dependence on water is expected to decrease as we work toward our climate goals that include retirements within our fossil fuel fired generation fleet. As the transition to renewables continues, the water intensity value is likely to decrease.*

### Row 3

20.95

#### (9.7.1.2) Numerator: water aspect

Select from:

Total water withdrawals

#### (9.7.1.3) Denominator

Select from:

MWh

#### (9.7.1.4) Comparison with previous reporting year

Select from:

About the same

### (9.7.1.5) Please explain

Total water withdrawals per MWh was selected as it provides insight on the impacted water, even though not consumed, by Evergy for electric generation. For this metric, the net generation is comprehensive of Evergy's entire fleet. This includes generation that does not rely on water such as wind and solar. This will be beneficial in future years' analysis to understand overall impact to water resources. Evergy historically has focused on consumption internally but has recently incorporated water withdrawals into data collection. Future Outlook: As reflected in our most recent Integrated Resource Plan, we expect to retire coal generation units in the future and add new renewable generation sources which don't rely on water; as result, we expect water withdrawals to decrease in the future. As the transition away from water intensive generation continues, the water withdrawal intensity is likely to decrease in tandem.

### (9.13) Do any of your products contain substances classified as hazardous by a regulatory authority?

	Products contain hazardous substances	Comment
	Select from: <input checked="" type="checkbox"/> No	Not applicable.

[Fixed row]

### (9.14) Do you classify any of your current products and/or services as low water impact?

#### (9.14.1) Products and/or services classified as low water impact

Select from:

Yes

#### (9.14.2) Definition used to classify low water impact

For the production of electricity, low water impact is defined by quality and quantity. Criteria used to determine low water impact are electric generation sites that used no process water or an insignificant amount of water for operations on an annual basis. For this definition, an insignificant amount is considered to be when a

generation site's water use is less than 0.01% of Evergy's total generation water withdrawn. This is in conjunction with having no direct impact to receiving streams by not discharging process wastewater offsite which is also needed in order to be considered to be low water impact generation.

#### (9.14.4) Please explain

Evergy's generation portfolio includes wind, solar and combustion turbine sites, all of which have significantly lower water impact than steam generation units. For wind and solar facilities, water use and impact to surrounding water bodies is negligible as there is no process wastewater involved nor discharge to surface or groundwater. For combustion turbine sites, water use is limited to evaporative coolers and reverse osmosis equipment which reduces Evergy's impact. Of the six combustion turbine facilities, four did not discharge during 2023. The two that discharged accounted for 0.006% of Evergy's total discharges. Therefore, these generation resources are considered to be low water impact due to both quality and quantity considerations.

None, alignment not assessed

### (9.15.2.13) Explain target coverage and identify any exclusions

100% of target achieved. Evergy provides access and consistently provides WASH services to individuals on Evergy's sites.

### (9.15.2.14) Plan for achieving target, and progress made to the end of the reporting year

100% of target achieved.

### (9.15.2.16) Further details of target

none

## Row 3

### (9.15.2.1) Target reference number

Select from:

Target 2

### (9.15.2.2) Target coverage

Select from:

Organization-wide (direct operations only)

### (9.15.2.3) Category of target & Quantitative metric

#### Water withdrawals

Other water withdrawals, please specify :Increase in the proportion of sites monitoring water consumption total volumes

#### (9.15.2.4) Date target was set

12/31/2022

#### (9.15.2.5) End date of base year

12/31/2020

#### (9.15.2.7) End date of target year

12/31/2022

#### (9.15.2.10) Target status in reporting year

Select from:

Underway

#### (9.15.2.12) Global environmental treaties/initiatives/ frameworks aligned with or supported by this target

Select all that apply

None, alignment not assessed

#### (9.15.2.13) Explain target coverage and identify any exclusions

*Target is for complete, comprehensive tracking of water withdraws and consumption at Evergy generation facilities on a monthly basis. To understand Evergy's real time impact on water resources, the company must have accurate data on water withdraws and consumption at all major water users. For Evergy, that represents the generation facilities. Previous efforts focused on annual updates of water metrics. Monthly metrics using data analytics is being developed to allow for the timely feedback necessary to include water considerations in operation and planning decisions.*

#### (9.15.2.14) Plan for achieving target, and progress made to the end of the reporting year

*This target reaches 100% when all Evergy generation facilities are included in monthly tracking of both water withdraws and consumption. As of the end of 2023, all water withdraw tracking is complete with routine monthly updates. Water consumption tracking is under development and partially complete with a target date in 2024 for full completion. This target completion will allow for the inclusion of timely feedback to support decisions regarding operations and planning. Target completion is expected to be achieved through additional investment in data gathering resources*

### (9.15.2.16) Further details of target

*none*

### Row 4

### (9.15.2.1) Target reference number

### (9.15.2.12) Global environmental treaties/initiatives/ frameworks aligned with or supported by this target

Select all that apply

None, alignment not assessed

### (9.15.2.13) Explain target coverage and identify any exclusions

*Target is based on 100% compliance with every NPDES permit limitation, for each water sample taken, at all locations. In 2023, a limited number of Evergy's samples of discharged water was in exceedance of the established NPDES limit. The number of samples that were outside of the NPDES requirements was approximately 0.07% of Evergy's overall NPDES samples, meaning that compliance was achieved for 99.93% of Evergy's sampled water discharges.*

### (9.15.2.14) Plan for achieving target, and progress made to the end of the reporting year

*Progress is underway*

### (9.15.2.16) Further details of target

*none*
